BUSINESS BANK · BUSINESS BANKING TRANSFORMATION OFFICE · BB-BLP-BPR

1.2 As-Is Process Maps L3/L4

Business lending lifecycle on BLP

Deliverable	1.2 Validated as-is maps L3/L4
Version	0.3 – pre-workshop baseline (Week 3). Becomes v1.0 after WS-02 to WS-14 validation (Week 6)
Source	BLP Customer Journeys current-state maps, 22 pages, 02/04/2026 (Replacement Programme); RFP BB-BLP-RFP-001
Owner	WS1 Journeys & Process (BPR/TOM Lead)
Accepted by	Design Authority (v1.0)

How to read this document

Legend

Purpose

These maps are the fact base for Phase 1. They redraw the 22 current-state maps produced for the Replacement Programme in a single consistent notation, and add what those maps do not show: control points, wait points, system versus manual steps, segment variants, and the five exception paths that were drawn as sub-process boxes without content.

Status of each map

Draft for validation: redrawn from the source with enrichment; to be confirmed in the named workshop. **Straw-man**: no source map exists; drawn from notes and RFP text to give the workshop something to correct. Nothing in a straw-man should be treated as fact.

Levels

L3 is the swimlane diagram: one per journey stage, actor lanes, decision points, hand-offs. **L4** is the step table beneath it: one row per step with type, control, wait and observation. L4 detail that the source does not support is left blank rather than invented.

Identifiers

Map IDs: journey code + stage (NM-2 = New Money, Deal & Credit). Step IDs are unique within a map; lane prefix R = RM, S = system, K = Credit, C = customer, F = Fulfilment, G = Lending Services, Q = Securities, B = SBS, D = decision, X = sub-process, E = end. Control references Cn link to the control index on the next page and seed deliverable 1.6.

What the enrichment adds

Marker	Meaning	Feeds
Cn badge	A step that exists to satisfy a policy, regulatory, audit or practice control	1.6 control inventory; Phase 2 control equivalence
Wait clock	A point where the deal waits on a customer, a queue or a hand-off	1.4 baseline wait-vs-touch; H-C1 to H-C4
Grey box	Performed in BLP (system step)	1.7 workaround inventory; Phase 2 fit-gap
Loop-back arrow	Rework path	1.4 rework rates; H-C1, H-C3
Observations	What the map shows that matters for design, tagged to hypotheses	1.9 pain-point register; 1.11 report
Open questions	What the workshop must answer	Workshop agendas WS-02 to WS-14

Map index

Map	Journey	Stage	Lanes	Steps	Controls	Wait points	Source	Workshop	Status
NM-1	New Money / Increase	Lead, Customer & Opportunity	Customer, RM, BLP (system)	18	C1, C0	1	Source map p.1	WS-02	Draft for validation

SR-2	Shadow Limit Reallocation	Completion & Fulfilment	Fulfilment, Customer, RM, BLP (system)	15	C8, C9, C10, C11	3	Source map p.20	WS-10	Draft for validation
SD-1	Staged Drawdown Allocation	Customer, Deal & Credit	Customer, RM, BLP (system), Credit	20	C1, C19, C3, C4, C5, C6	1	Source map p.21	WS-10	Draft for validation
SD-2	Staged Drawdown Allocation	Completion & Fulfilment	Fulfilment, Customer, RM, BLP (system)	15	C8, C9, C10, C11	3	Source map p.22	WS-10	Draft for validation
EX-01	Exception path	Decline / appeal / refer	Customer, RM, BLP (system), Credit	10	C20, C21	1	Not mapped in source (blue sub-process box)	WS-11	**Straw-man – to be built in workshop**
EX-02	Exception path	Deferred – further information required	Customer, RM, BLP (system), Credit	9	C6	3	Not mapped in source (loop-back arrow only)	WS-11	**Straw-man – to be built in workshop**
EX-03	Exception path	Change in deal after credit approval	Customer, RM, BLP (system), Credit	7	C22, C6	0	Not mapped in source (note: “deal to be re-processed”)	WS-11	**Straw-man – to be built in workshop**
EX-04	Exception path	In-flight CAP referral to SBS	RM, BLP (system), Credit, SBS / PS	8	C7, C14	1	Not mapped in source (blue sub-process box on Deal & Credit maps)	WS-07 / WS-11	**Straw-man – to be built in workshop**
EX-05	Exception path	Security preparation (Lending Services)	Customer, RM, BLP (system), Lending Services	8	C23, C10	3	Not mapped in source (blue sub-process box on Completion maps)	WS-12	**Straw-man – to be built in workshop**
DP-1	Deposit opportunity	Record and close	Customer, RM, BLP (system)	7		1	Derived from RFP description and NM-1	WS-02	Draft for validation

Structural findings visible before validation

#	Finding	Evidence in the maps	Hypothesis
F1	One deal-start sequence serves every journey	Steps S1–S4 + retrieve (login, landing page, search, located, retrieve details) are identical in NM-1, RN-1, VA-1, RF-1, CR-1, CS-1, SL-1, SR-1, SD-1 — nine journeys, same five steps	B1
F2	One Deal & Credit flow serves New Money, Renewal, Variation and Shadow Limit origination	NM-2, RN-2, VA-2, SL-2 differ only in start label, the “no” sub-process (decline / withdraw / remove) and notes	A1, B2
F3	One Completion & Fulfilment flow serves six journeys	NM-3, VA-3, SL-3, SR-2, SD-2 share 15 steps; RN-3 is a shortened version without security	B2, C2
F4	Two genuine fast-tracks already exist	SR-1 and SD-1: pre-approved facility, straight to PDQ, Credit only on material change	A2 (model for L1)
F5	Every Deal & Credit map carries two unbounded loop-backs	Deferred – further info (to update system) and Declined (to EX-01); no count or time limit	C1
F6	Facility letters are manual on every journey and off-platform on two	“Manual PDF by email” on NM-3; red-flagged off-platform letters on SL-2, SD-1, SD-2	C2, D2, D3
F7	Five exception paths are referenced but not mapped	Decline/appeal/refer, deferral, change after approval, in-flight CAP, security preparation appear only as boxes or notes	C1, C3, C4
F8	Segment variation is shown once	RN-3 only: who checks the returned letter (RM / Business Ops / Corporate Associate)	WS-14 to establish others
F9	The deal-type model is worked around	SD-1 uses deal type “Staged Drawdown” with facility request type “Variation”; Remove All Facilities is mapped but is not a deal type	B3, B4

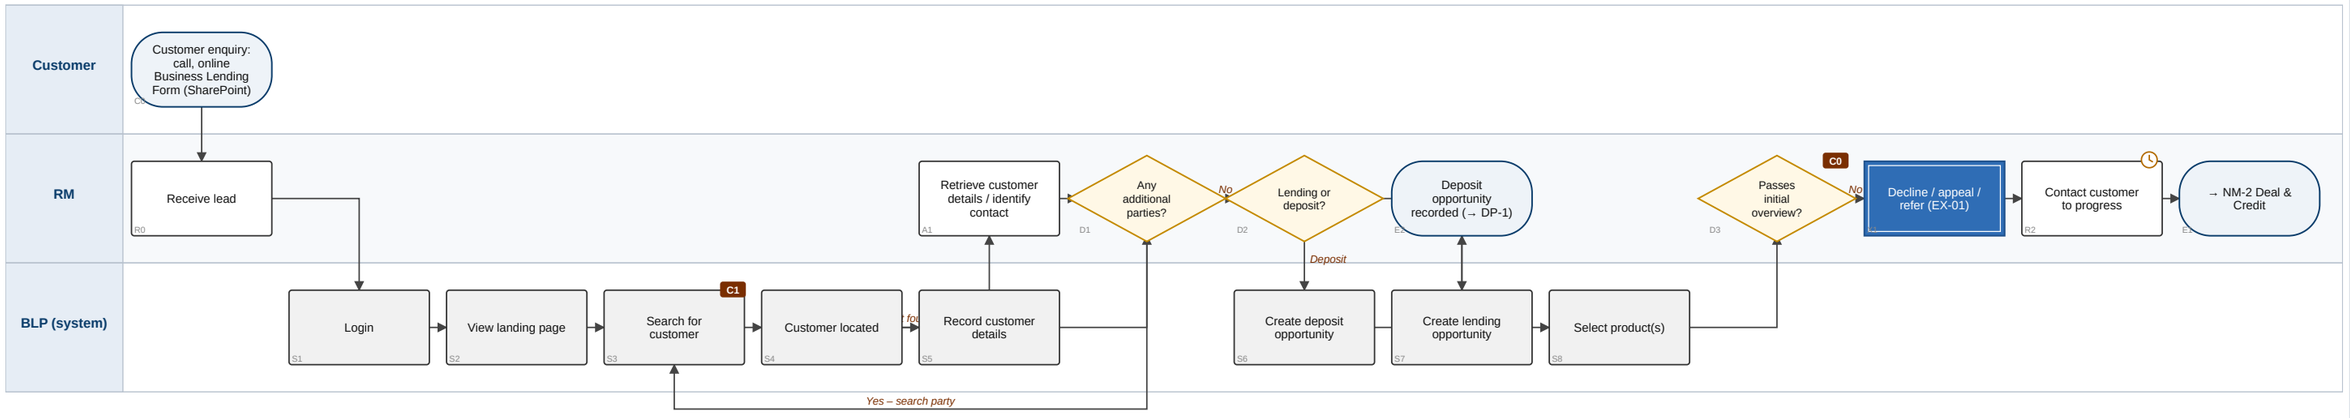

Control index (seed for 1.6)

Every control badge on the maps, with a working definition and where it appears. Source classification (policy / regulatory / audit / practice / system) is populated in WS-13 and recorded in deliverable 1.6.

Ref	Working definition	Appears in	Manual / automated (as-is)	Source classification
C0	RM initial overview / pre-screen	NM-1, SL-1	Manual	WS-13
C1	Customer identification (CIF lookup, party records)	NM-1, RN-1, VA-1, RF-1, CR-1, CS-1, SL-1, SR-1, SD-1	Partly automated	WS-13
C2	Credit analytics: ECRS, lending category, debt servicing, credit memo, external credit integrity checks	NM-2, RN-2, VA-2, CR-2, CS-2, SL-2	Manual	WS-13
C3	Deal validation (completeness, mandatory fields)	NM-2, RN-2, VA-2, CR-2, CS-2, SL-2, SR-1, SD-1	Manual	WS-13
C4	Facility letter / agreement documents checked against approved terms	NM-2, RN-2, VA-2, SL-2, SR-1, SD-1	Manual	WS-13
C5	Delegated-authority check	NM-2, RN-2, VA-2, SL-2, SR-1, SD-1	Manual	WS-13
C6	Independent credit assessment	NM-2, RN-2, VA-2, CR-2, SL-2, SR-1, SD-1, EX-02, EX-03	Manual	WS-13
C7	Financial distress screen (existing customers)	NM-2, RN-2, VA-2, SL-2, EX-04	Manual	WS-13
C8	Returned facility letter checked against issued terms	NM-3, RN-3, VA-3, SL-3, SR-2, SD-2	Manual	WS-13
C9	Pre-conditions / conditions precedent checklist	NM-3, VA-3, SL-3, SR-2, SD-2	Manual	WS-13
C10	Security perfected / released by Lending Services or Securities Team	NM-3, VA-3, RF-2, SL-3, SR-2, SD-2, EX-05	Manual	WS-13
C11	Fulfilment against approved and documented terms	NM-3, RN-3, VA-3, SL-3, SR-2, SD-2	Manual	WS-13
C12	Outstanding balance repaid before facility removal	RF-2	Manual	WS-13
C13	Credit authority decides whether CAP referral proceeds to SBS	CR-2	Manual	WS-13
C14	SBS categorisation decision	CR-2, EX-04	Manual	WS-13
C15	Forbearance assessment (regulatory)	CR-2	Manual	WS-13
C16	CAP Strategy memo	CS-2	Manual	WS-13
C17	ERV, provisions and write-off data (impairment reporting)	CS-2	Manual	WS-13
C18	SBS approval authority	CS-2	Manual	WS-13
C19	Reallocation / tranche within pre-approved limit	SR-1, SD-1	Partly automated	WS-13
C20	Decline communication to customer	EX-01	Manual	WS-13
C21	Appeal reviewed independently of original decision-maker	EX-01	Manual	WS-13
C22	Materiality of post-approval change	EX-03	Manual	WS-13
C23	Security documentation per approved terms	EX-05	Manual	WS-13

NM-1 · New Money / Increase · Lead, Customer & Opportunity

Source	Validation workshop	Status	Lanes
Source map p.1	WS-02	Draft for validation	Customer · RM · BLP (system)

Observations

- Steps S1–S4 and A1 (login → landing → search → located → retrieve) are identical in every journey mapped (H-B1).
- The lending/deposit split is the only point where deposits touch the lending process; the deposit path has no workflow stages.
- The initial overview (C0) is the only pre-credit filter and has no documented criteria; decline reasons at this point are not captured.
- Lead receipt is unmanaged: there is no lead register or SLA from enquiry to first contact.

Open questions for WS-02

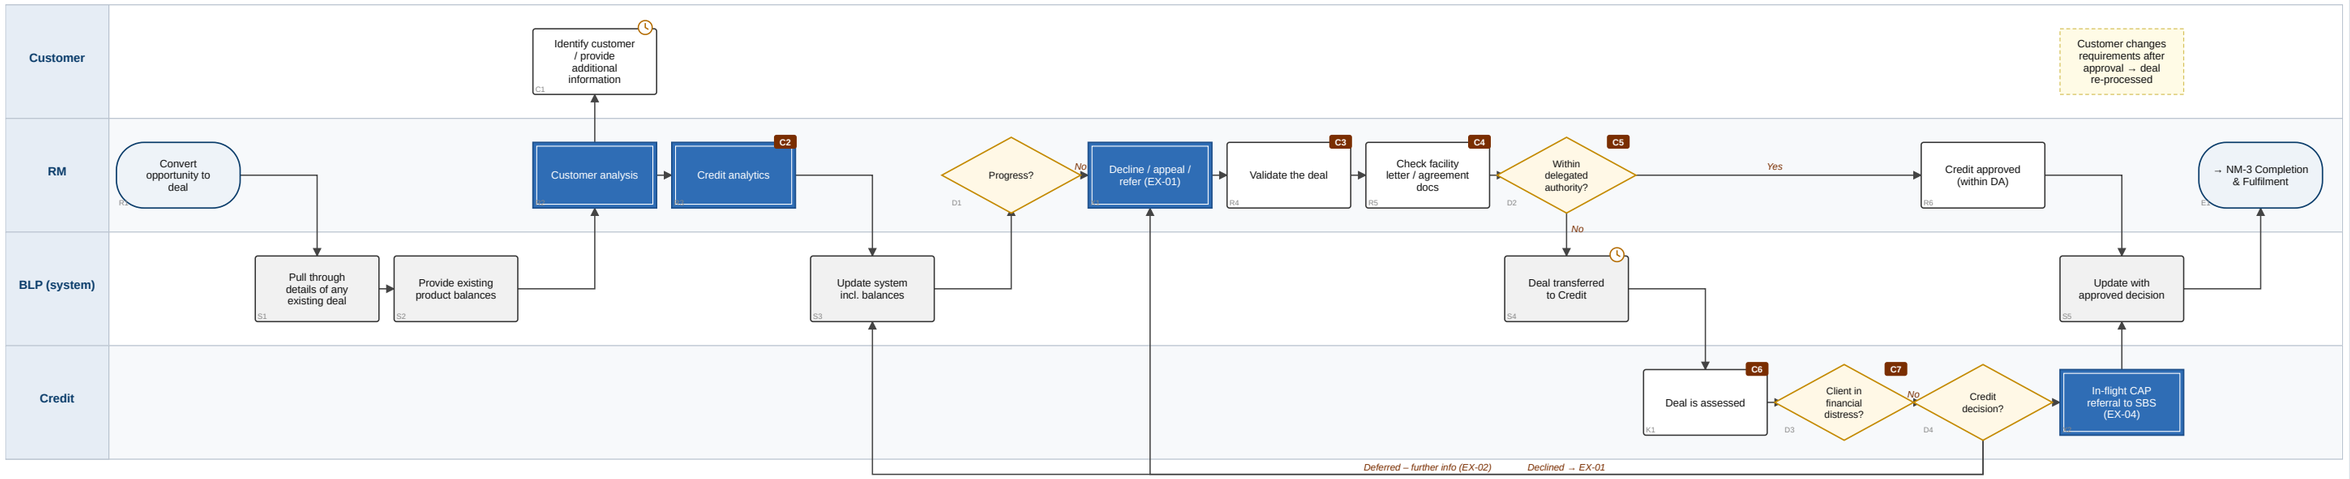

- Is the CYB credit card enquiry form a live lead source? (source: TBC)
- What share of enquiries are declined at initial overview, and is a reason recorded anywhere?
- Can an RM legitimately create a deal without an opportunity today, and how often does this happen?

L4 step table

ID	Lane	Step	Type	Control	Wait	Note / as-is detail
C0	Customer	Customer enquiry: call, online Business Lending Form (SharePoint) or face-to-face	Start			TBC: CYB credit card enquiry form as a lead source
R0	RM	Receive lead	Manual			No lead register; leads arrive by phone, form or email
S1	BLP (system)	Login	System			Single sign-on not in place; separate BLP credentials
S2	BLP (system)	View landing page	System			Landing page does not surface work due (renewals, tasks)
S3	BLP (system)	Search for customer	System	C1		C1: customer identification via CIF number lookup
S4	BLP (system)	Customer located	System			
A1	RM	Retrieve customer details / identify contact	Manual			
S5	BLP (system)	Record customer details	System			New-to-bank only
D1	RM	Any additional parties?	Decision			
D2	RM	Lending or deposit?	Decision			
S6	BLP (system)	Create deposit opportunity	System			No approval workflow; RM sets Won / Declined by Bank / Declined by Customer
S7	BLP (system)	Create lending opportunity	System			
S8	BLP (system)	Select product(s)	System			Note on source: system should allow progress to deal without an opportunity
D3	RM	Passes initial overview?	Decision	C0		C0: RM pre-screen; criteria undocumented
X1	RM	Decline / appeal / refer (EX-01)	Sub-process			
R2	RM	Contact customer to progress	Manual		●	
E1	RM	→ NM-2 Deal & Credit	End			
E2	RM	Deposit opportunity recorded (→ DP-1)	End			

NM-2 · New Money / Increase · Deal & Credit

Source	Validation workshop	Status	Lanes
Source map p.2	WS-02	Draft for validation	Customer · RM · BLP (system) · Credit

Observations

- Two loop-backs leave Credit: Declined (to EX-01) and Deferred – further information required (to S3). Neither is bounded by a time or count limit.
- The delegated-authority check (C5, D2) is manual although limit, grade and exposure data are held in BLP (H-E2).
- The distress screen (C7) applies to existing-customer deals only and sits after full assessment, so distressed cases consume a full Credit review before referral.
- Change after approval (EX-03) has no defined path; the source note says the deal is “re-processed”.

Open questions for WS-02

- What is the deferral rate and average number of deferral loops per deal?
- Which of C2’s checks are performed in BLP vs. in other systems or spreadsheets?
- What proportion of New Money deals are decided within delegated authority vs. by Credit?

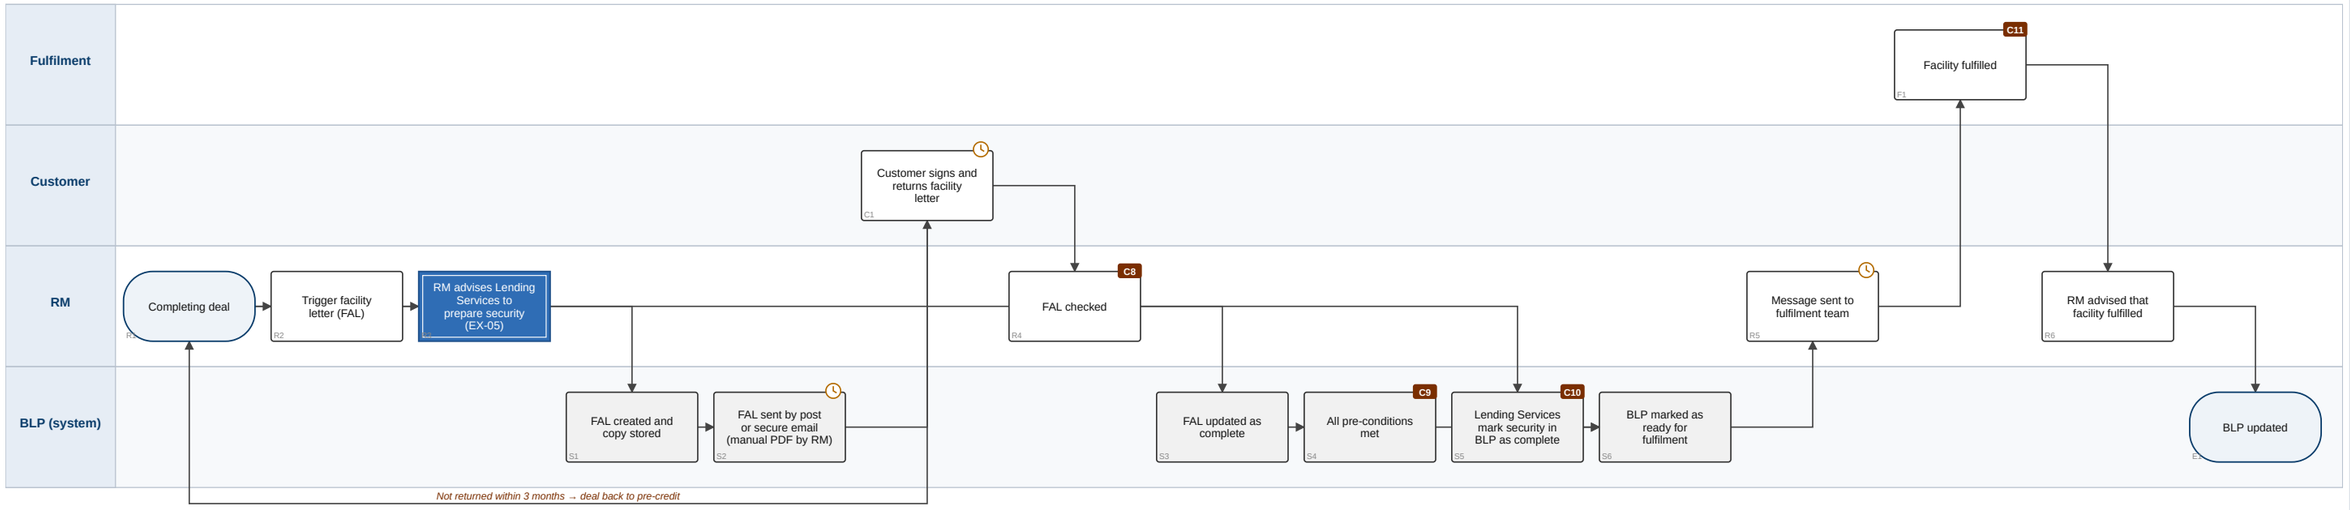

L4 step table

ID	Lane	Step	Type	Control	Wait	Note / as-is detail
R1	RM	Convert opportunity to deal	Start			
S1	BLP (system)	Pull through details of any existing deal	System			
S2	BLP (system)	Provide existing product balances	System			Balances sourced from MEO / IMPACS; latency TBC
R2	RM	Customer analysis	Sub-process			
C1	Customer	Identify customer / provide additional information	Manual		●	Customer-side wait; no system tracking of requests
R3	RM	Credit analytics	Sub-process	C2		C2: ECRS classification, lending category, debt servicing, credit memo, external credit integrity checks
S3	BLP (system)	Update system incl. balances	System			
D1	RM	Progress?	Decision			
X1	RM	Decline / appeal / refer (EX-01)	Sub-process			
R4	RM	Validate the deal	Manual	C3		C3: deal validation (completeness, mandatory fields)
R5	RM	Check facility letter / agreement docs	Manual	C4		C4: document check against approved terms
D2	RM	Within delegated authority?	Decision	C5		C5: delegated-authority check, performed manually
S4	BLP (system)	Deal transferred to Credit	System		●	Queue wait at Credit
K1	Credit	Deal is assessed	Manual	C6		C6: independent credit assessment
D3	Credit	Client in financial distress?	Decision	C7		C7: distress screen; existing-customer deals only
D4	Credit	Credit decision?	Decision			
X2	Credit	In-flight CAP referral to SBS (EX-04)	Sub-process			

R6	RM	Credit approved (within DA)	Manual			
S5	BLP (system)	Update with approved decision	System			
E1	RM	→ NM-3 Completion & Fulfilment	End			
Notes on source map: Customer changes requirements after approval → deal re-processed (EX-03)						

NM-3 · New Money / Increase · Completion & Fulfilment

Source	Validation workshop	Status	Lanes
Source map p.3	WS-03	Draft for validation	Fulfilment · Customer · RM · BLP (system)

Observations

- The facility letter is generated in BLP but issued manually by the RM as a PDF by email or post; the source states the preference for automation (H-C2, H-D3).
- Three completion conditions (letter complete, pre-conditions met, security complete) converge before “ready for fulfilment”; there is no single view of which is outstanding.
- An unreturned letter at 3 months sends the deal back to pre-credit: a full re-approval for a timing failure.
- Hand-off to Fulfilment is by message; Fulfilment queue time is not visible in BLP.

Open questions for WS-03

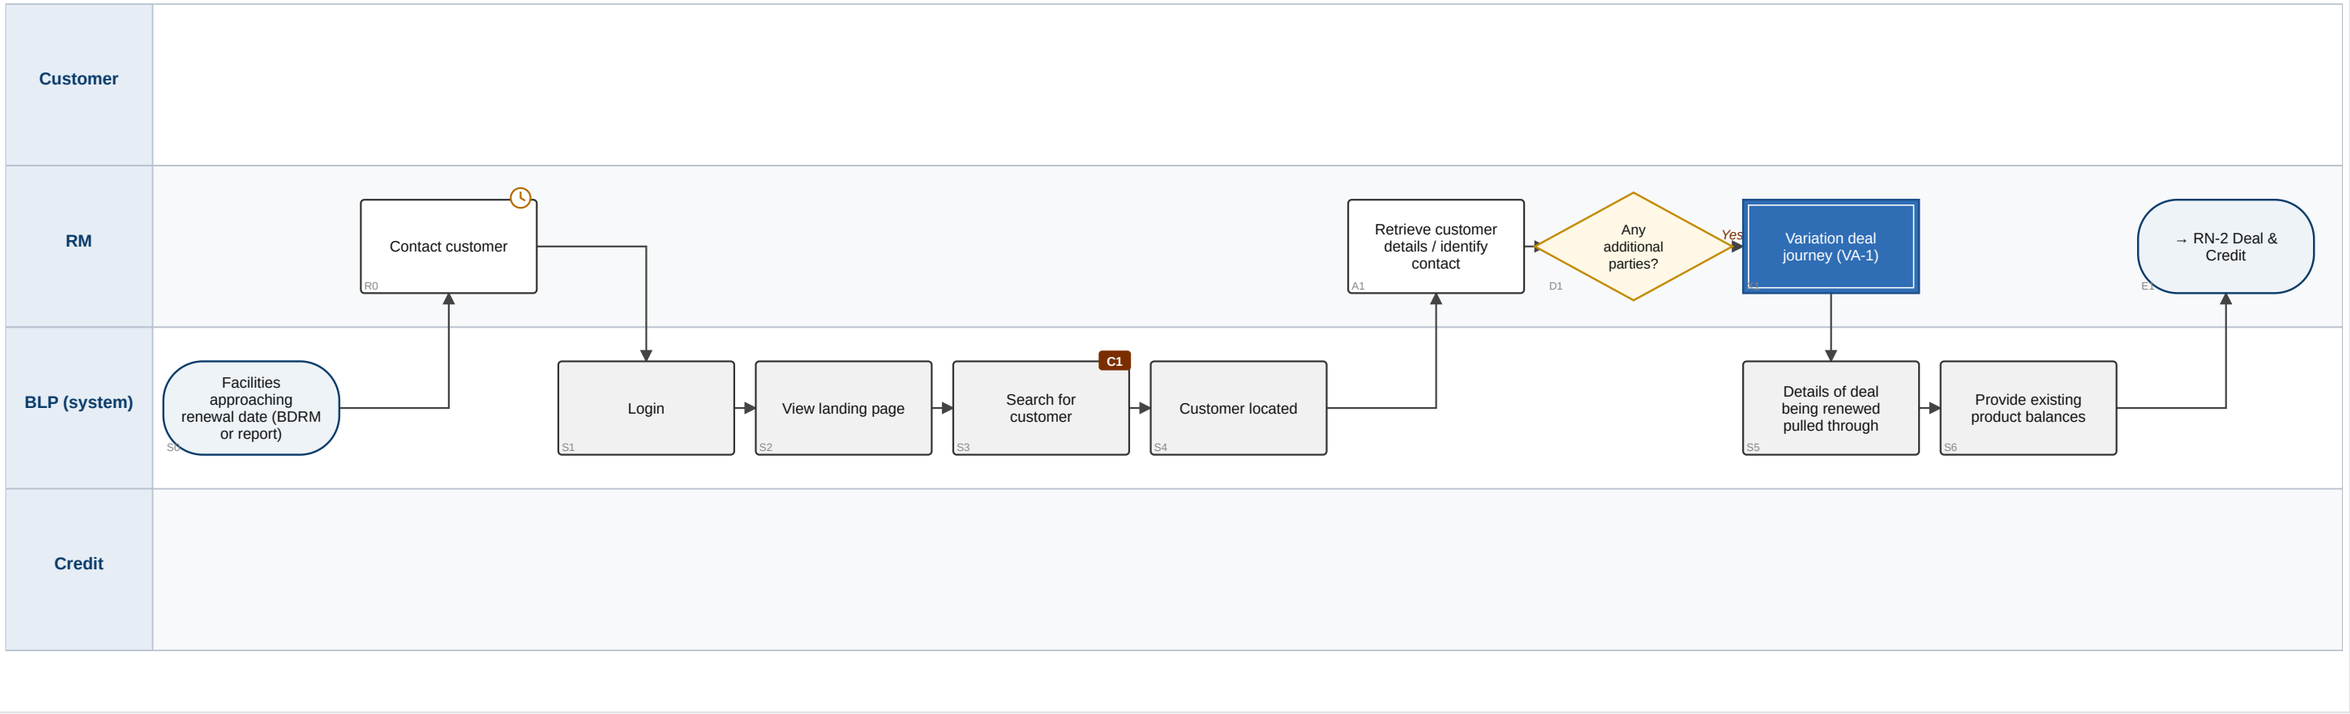

- How is “sent” and “returned” evidenced today if BLP does not capture it?
- How many deals hit the 3-month reset in the last 12 months?
- What is the SLA, if any, between “ready for fulfilment” and “facility fulfilled”?

L4 step table

ID	Lane	Step	Type	Control	Wait	Note / as-is detail
R1	RM	Completing deal	Start			
R2	RM	Trigger facility letter (FAL)	Manual			
R3	RM	RM advises Lending Services to prepare security (EX-05)	Sub-process			
S1	BLP (system)	FAL created and copy stored	System			
S2	BLP (system)	FAL sent by post or secure email (manual PDF by RM)	System		●	Manual issuance by RM; no sent/returned tracking in BLP
C1	Customer	Customer signs and returns facility letter	Manual		●	Longest customer-side wait; 3-month unreturned reset
R4	RM	FAL checked	Manual	C8		C8: returned letter checked against issued terms
S3	BLP (system)	FAL updated as complete	System			
S4	BLP (system)	All pre-conditions met	System	C9		C9: pre-conditions / CP checklist
S5	BLP (system)	Lending Services mark security in BLP as complete	System	C10		C10: security perfected before drawdown
S6	BLP (system)	BLP marked as ready for fulfilment	System			
R5	RM	Message sent to fulfilment team	Manual		●	Hand-off by message; queue at Fulfilment
F1	Fulfilment	Facility fulfilled	Manual	C11		C11: fulfilment against approved and documented terms
R6	RM	RM advised that facility fulfilled	Manual			
E1	BLP (system)	BLP updated	End			

RN-1 · Renewal / Extension Pending Review · Lead, Customer & Opportunity

Source	Validation workshop	Status	Lanes
Source map p.4	WS-04	Draft for validation	Customer · RM · BLP (system) · Credit

Observations

- The renewal trigger is a report outside the workflow; nothing in BLP creates a task or alerts the RM.
- Any party change diverts a renewal into the Variation journey, so a renewal with a changed guarantor is processed as a restructure.
- Credit lane is empty at this stage in the source: no pre-screening of renewal risk before RM effort is spent.

Open questions for WS-04

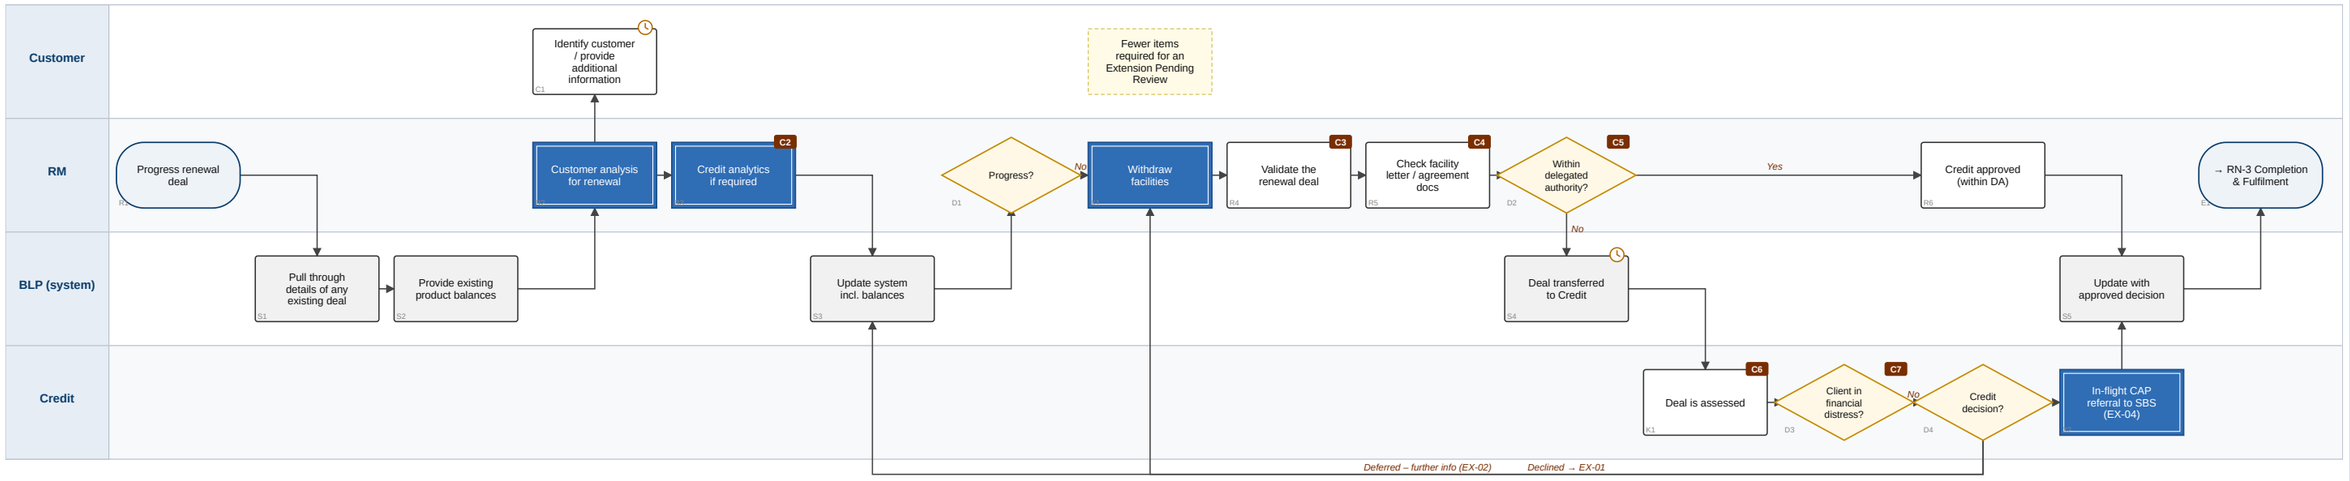

- What share of renewals start late (after review date) because the trigger is report-based?
- Is the BDRM report run centrally or by each RM?

L4 step table

ID	Lane	Step	Type	Control	Wait	Note / as-is detail
S0	BLP (system)	Facilities approaching renewal date (BDRM or report)	Start			Trigger is a report, not a system task; source notes renewals as landing-page candidates
R0	RM	Contact customer	Manual		●	
S1	BLP (system)	Login	System			Single sign-on not in place; separate BLP credentials
S2	BLP (system)	View landing page	System			Landing page does not surface work due (renewals, tasks)
S3	BLP (system)	Search for customer	System	C1		C1: customer identification via CIF number lookup
S4	BLP (system)	Customer located	System			
A1	RM	Retrieve customer details / identify contact	Manual			
D1	RM	Any additional parties?	Decision			
X1	RM	Variation deal journey (VA-1)	Sub-process			
S5	BLP (system)	Details of deal being renewed pulled through	System			
S6	BLP (system)	Provide existing product balances	System			
E1	RM	→ RN-2 Deal & Credit	End			

RN-2 · Renewal / Extension Pending Review · Deal & Credit

Source	Validation workshop	Status	Lanes
Source map p.5	WS-04	Draft for validation	Customer · RM · BLP (system) · Credit

Observations

- The renewal Deal & Credit flow is step-for-step the same as New Money (H-A1, H-B2). By definition a Renewal has no structural change, yet it passes validation, document check, authority check and Credit assessment.
- EPR uses the same flow with “fewer items”; the difference is in content, not path. EPR is capped at 3 months and 3 consecutive extensions before mandatory Credit referral.
- Credit analytics is “if required”, but the criterion for when it is required is not defined.
- Withdrawing facilities on a non-progressing renewal is a sub-process without a map.

Open questions for WS-04

- What objective data (limit unchanged, grade, covenant status, watch-list) is available at S3 to support a fast-track route? (H-A2)
- How many renewals in the last 12 months went to Credit vs. were approved within delegated authority?
- How many EPR chains reached the maximum of 3?

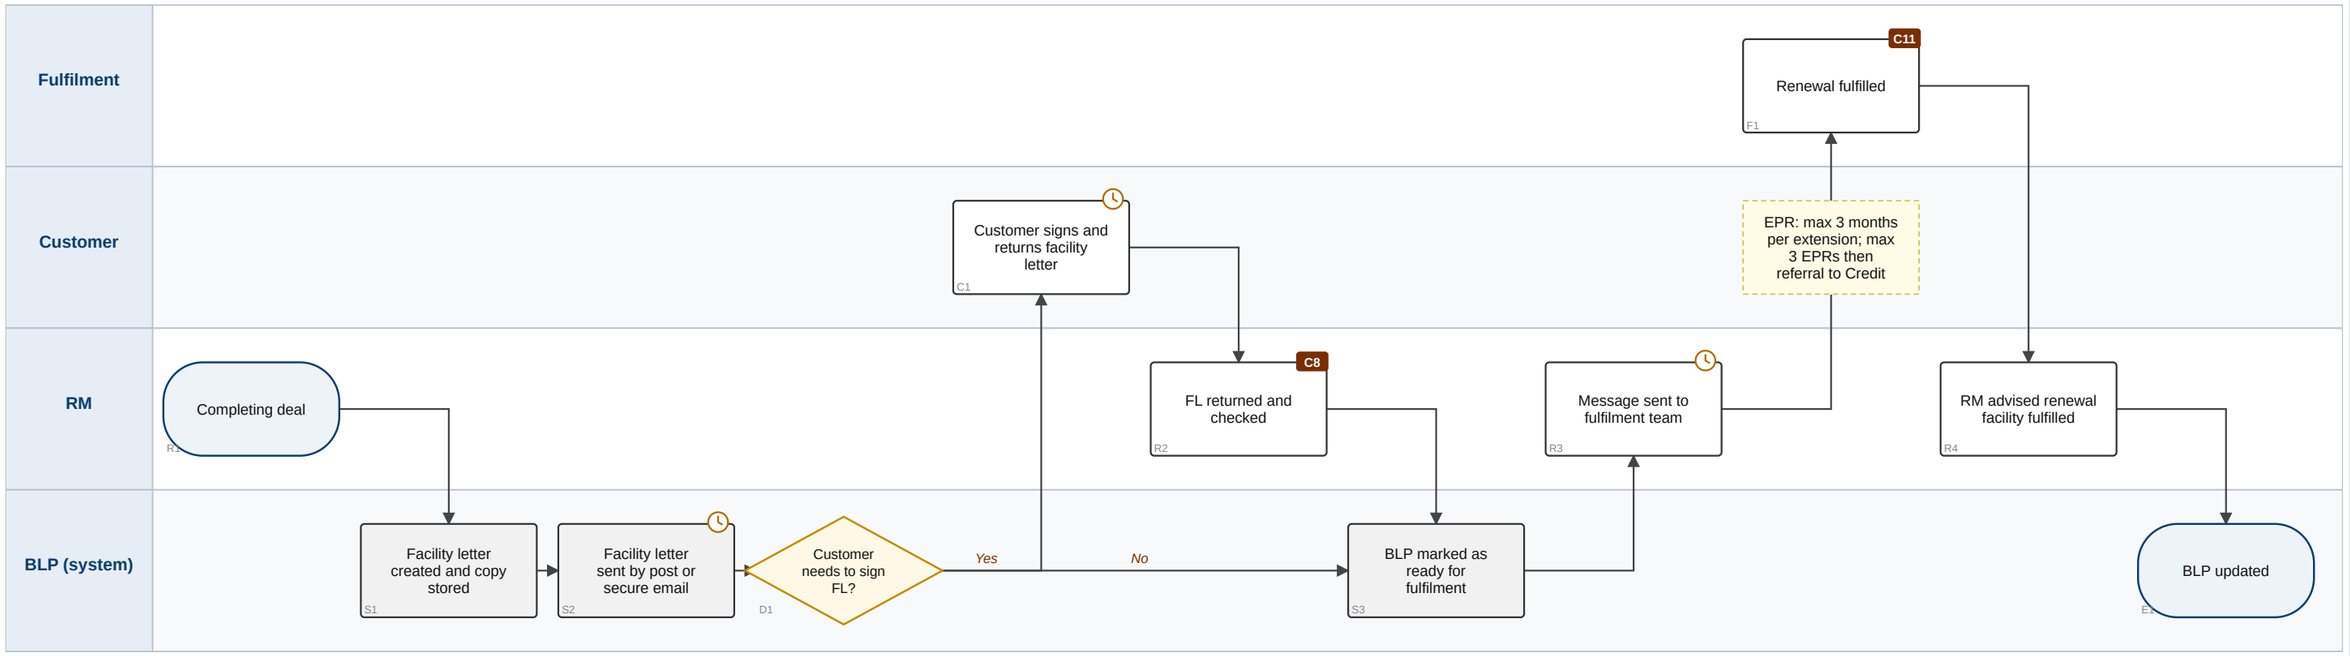

L4 step table

ID	Lane	Step	Type	Control	Wait	Note / as-is detail
R1	RM	Progress renewal deal	Start			
S1	BLP (system)	Pull through details of any existing deal	System			
S2	BLP (system)	Provide existing product balances	System			Balances sourced from MEO / IMPACS; latency TBC
R2	RM	Customer analysis for renewal	Sub-process			
C1	Customer	Identify customer / provide additional information	Manual		●	Customer-side wait; no system tracking of requests
R3	RM	Credit analytics if required	Sub-process	C2		C2: ECRS classification, lending category, debt servicing, credit memo, external credit integrity checks
S3	BLP (system)	Update system incl. balances	System			
D1	RM	Progress?	Decision			
X1	RM	Withdraw facilities	Sub-process			
R4	RM	Validate the renewal deal	Manual	C3		C3: deal validation (completeness, mandatory fields)
R5	RM	Check facility letter / agreement docs	Manual	C4		C4: document check against approved terms
D2	RM	Within delegated authority?	Decision	C5		C5: delegated-authority check, performed manually
S4	BLP (system)	Deal transferred to Credit	System		●	Queue wait at Credit
K1	Credit	Deal is assessed	Manual	C6		C6: independent credit assessment
D3	Credit	Client in financial distress?	Decision	C7		C7: distress screen; existing-customer deals only
D4	Credit	Credit decision?	Decision			
X2	Credit	In-flight CAP referral to SBS (EX-04)	Sub-process			
R6	RM	Credit approved (within DA)	Manual			

S5	BLP (system)	Update with approved decision	System			
E1	RM	→ RN-3 Completion & Fulfilment	End			
Notes on source map: Fewer items required for an Extension Pending Review						

RN-3 · Renewal / Extension Pending Review · Completion & Fulfilment

Source	Validation workshop	Status	Lanes
Source map p.6	WS-04	Draft for validation	Fulfilment · Customer · RM · BLP (system)

Observations

- This is the only stage in the source that shows a segment difference: who checks the returned letter varies by segment (RM / Business Ops / Corporate Associate).
- Some renewals do not need a signed letter (D1 = No) and go straight to fulfilment; the rule for which ones is not stated.
- No security step: a renewal does not revisit security, which is consistent with “no structural change”.

Open questions for WS-04

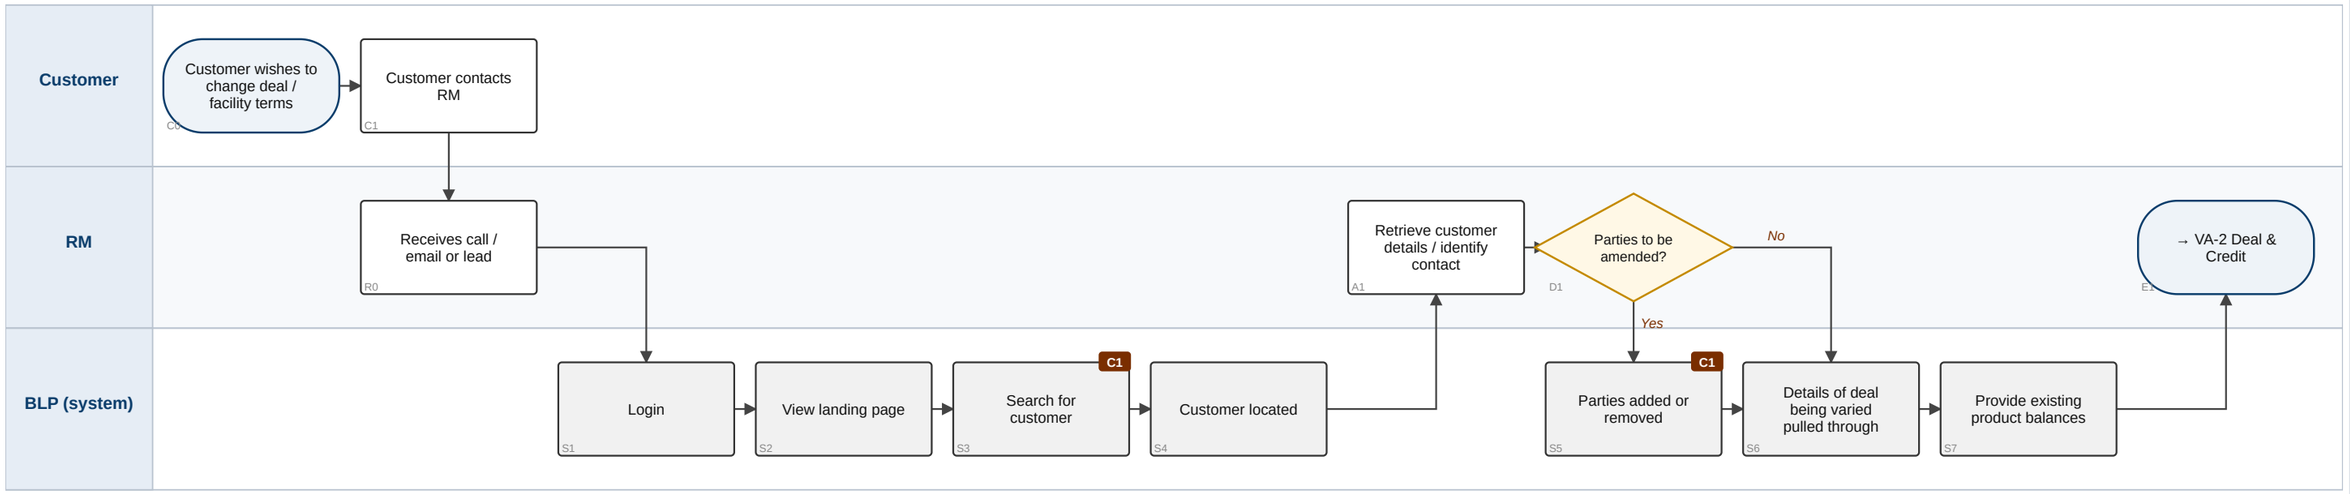

- What determines whether a renewal letter needs signing?
- Does Fulfilment do anything on a renewal beyond updating expiry dates? If not, is the hand-off necessary?

L4 step table

ID	Lane	Step	Type	Control	Wait	Note / as-is detail
R1	RM	Completing deal	Start			
S1	BLP (system)	Facility letter created and copy stored	System			
S2	BLP (system)	Facility letter sent by post or secure email	System		●	
D1	BLP (system)	Customer needs to sign FL?	Decision			
C1	Customer	Customer signs and returns facility letter	Manual		●	
R2	RM	FL returned and checked	Manual	C8		Performed by RM (Business Direct), Business Ops (Strategic Finance) or Corporate Associate (Corporate)
S3	BLP (system)	BLP marked as ready for fulfilment	System			
R3	RM	Message sent to fulfilment team	Manual		●	
F1	Fulfilment	Renewal fulfilled	Manual	C11		
R4	RM	RM advised renewal facility fulfilled	Manual			
E1	BLP (system)	BLP updated	End			
Notes on source map: EPR: max 3 months per extension; max 3 EPRs then referral to Credit						

VA-1 · Variation · Lead & Customer

Source	Validation workshop	Status	Lanes
Source map p.7	WS-05	Draft for validation	Customer · RM · BLP (system)

Observations

- Variation covers everything from a covenant date change to a security restructure; one journey, no triage by materiality (H-A4).
- Party changes are made in the system before any assessment of the change.

Open questions for WS-05

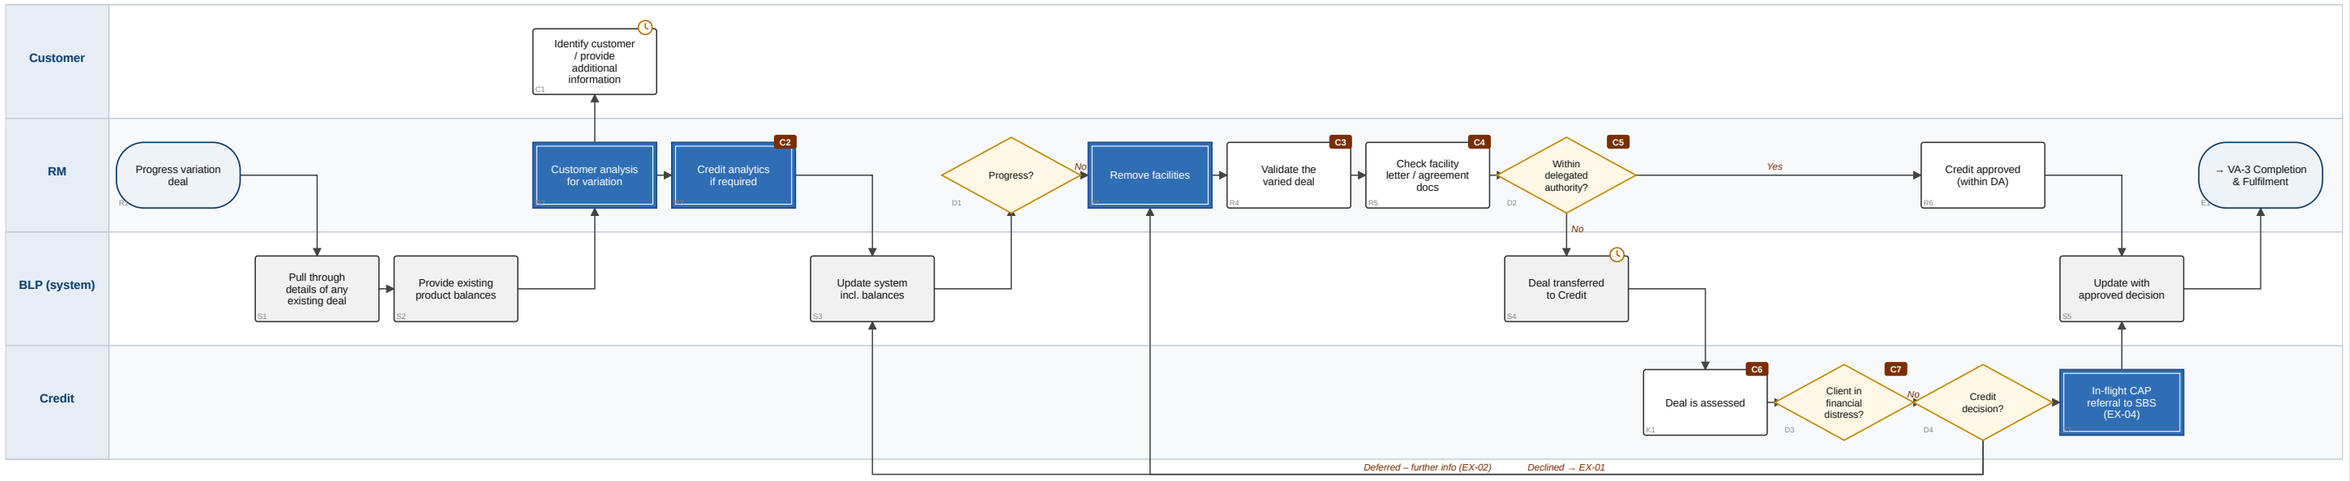

- What are the top variation reasons by volume? Is a reason code captured?
- Which variation types never go to Credit today?

L4 step table

ID	Lane	Step	Type	Control	Wait	Note / as-is detail
C0	Customer	Customer wishes to change deal / facility terms	Start			Parties, products, decrease (not full repayment), terms, interest rate, security, covenants. New money or change of borrower → New Money journey
C1	Customer	Customer contacts RM	Manual			
R0	RM	Receives call / email or lead	Manual			
S1	BLP (system)	Login	System			Single sign-on not in place; separate BLP credentials
S2	BLP (system)	View landing page	System			Landing page does not surface work due (renewals, tasks)
S3	BLP (system)	Search for customer	System	C1		C1: customer identification via CIF number lookup
S4	BLP (system)	Customer located	System			
A1	RM	Retrieve customer details / identify contact	Manual			
D1	RM	Parties to be amended?	Decision			Partnerships and Ltd companies
S5	BLP (system)	Parties added or removed	System	C1		
S6	BLP (system)	Details of deal being varied pulled through	System			
S7	BLP (system)	Provide existing product balances	System			
E1	RM	→ VA-2 Deal & Credit	End			

VA-2 · Variation · Deal & Credit

Source	Validation workshop	Status	Lanes
Source map p.8	WS-05	Draft for validation	Customer · RM · BLP (system) · Credit

Observations

- Identical path to New Money and Renewal (H-B2); only the start label and the “no” sub-process differ.
- A 7,277-deal-a-year journey with no distinction between administrative amendments and credit-relevant restructures.

Open questions for WS-05

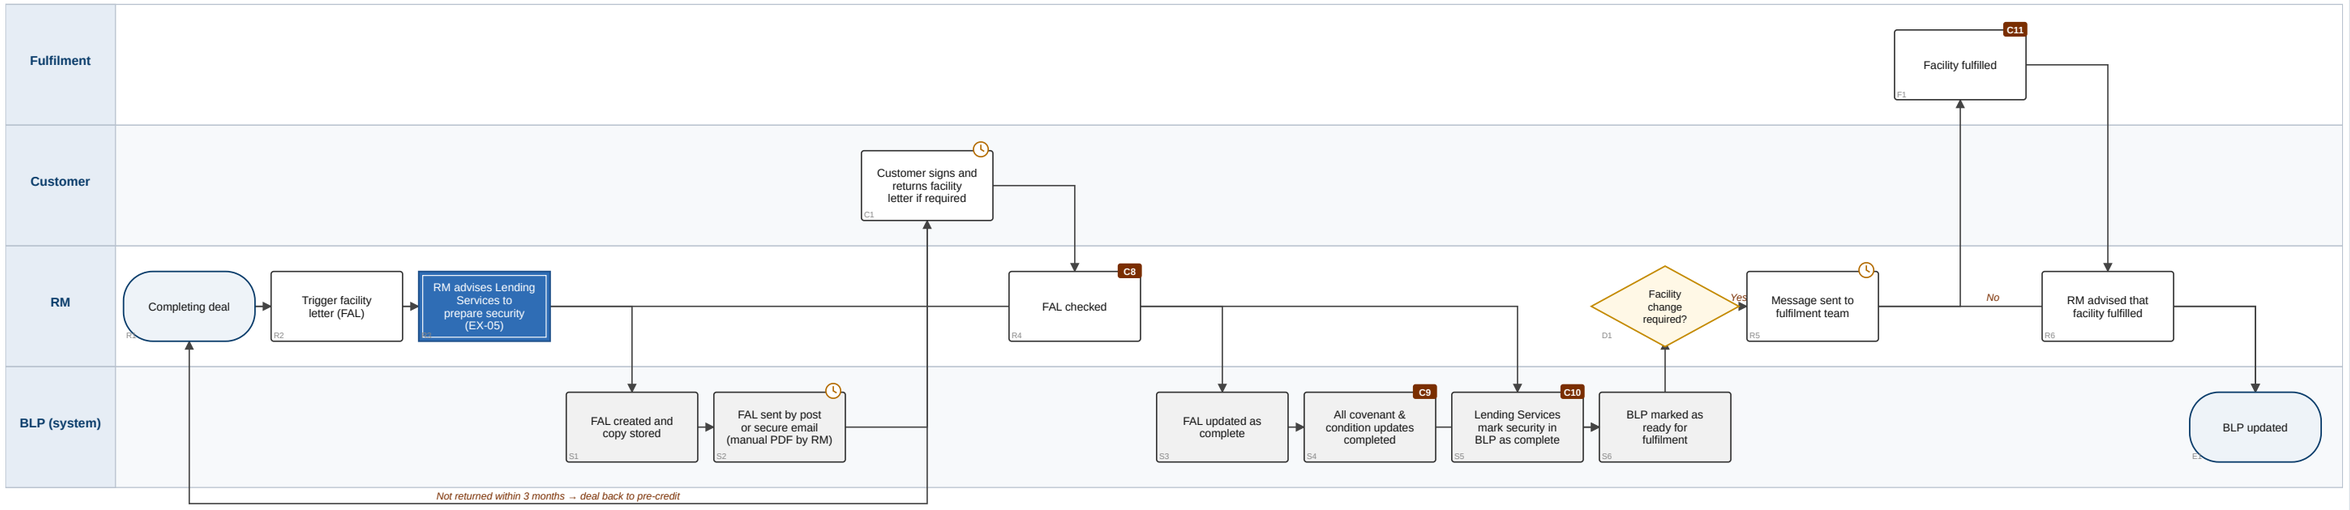

- Does an administrative variation (e.g. covenant due-date change) require Credit sign-off today, and if so under what policy?

L4 step table

ID	Lane	Step	Type	Control	Wait	Note / as-is detail
R1	RM	Progress variation deal	Start			
S1	BLP (system)	Pull through details of any existing deal	System			
S2	BLP (system)	Provide existing product balances	System			Balances sourced from MEO / IMPACS; latency TBC
R2	RM	Customer analysis for variation	Sub-process			
C1	Customer	Identify customer / provide additional information	Manual		●	Customer-side wait; no system tracking of requests
R3	RM	Credit analytics if required	Sub-process	C2		C2: ECRS classification, lending category, debt servicing, credit memo, external credit integrity checks
S3	BLP (system)	Update system incl. balances	System			
D1	RM	Progress?	Decision			
X1	RM	Remove facilities	Sub-process			
R4	RM	Validate the varied deal	Manual	C3		C3: deal validation (completeness, mandatory fields)
R5	RM	Check facility letter / agreement docs	Manual	C4		C4: document check against approved terms
D2	RM	Within delegated authority?	Decision	C5		C5: delegated-authority check, performed manually
S4	BLP (system)	Deal transferred to Credit	System		●	Queue wait at Credit
K1	Credit	Deal is assessed	Manual	C6		C6: independent credit assessment
D3	Credit	Client in financial distress?	Decision	C7		C7: distress screen; existing-customer deals only
D4	Credit	Credit decision?	Decision			
X2	Credit	In-flight CAP referral to SBS (EX-04)	Sub-process			
R6	RM	Credit approved (within DA)	Manual			
S5	BLP (system)	Update with approved decision	System			
E1	RM	→ VA-3 Completion & Fulfilment	End			

VA-3 · Variation · Completion & Fulfilment

Source	Validation workshop	Status	Lanes
Source map p.9	WS-05	Draft for validation	Fulfilment · Customer · RM · BLP (system)

Observations

- Same structure as New Money completion with one added decision: variations that do not change a facility skip Fulfilment.
- Security is re-instructed on every variation (R3) even where security is unchanged; whether this is a real step or a default is for the workshop.

Open questions for WS-05

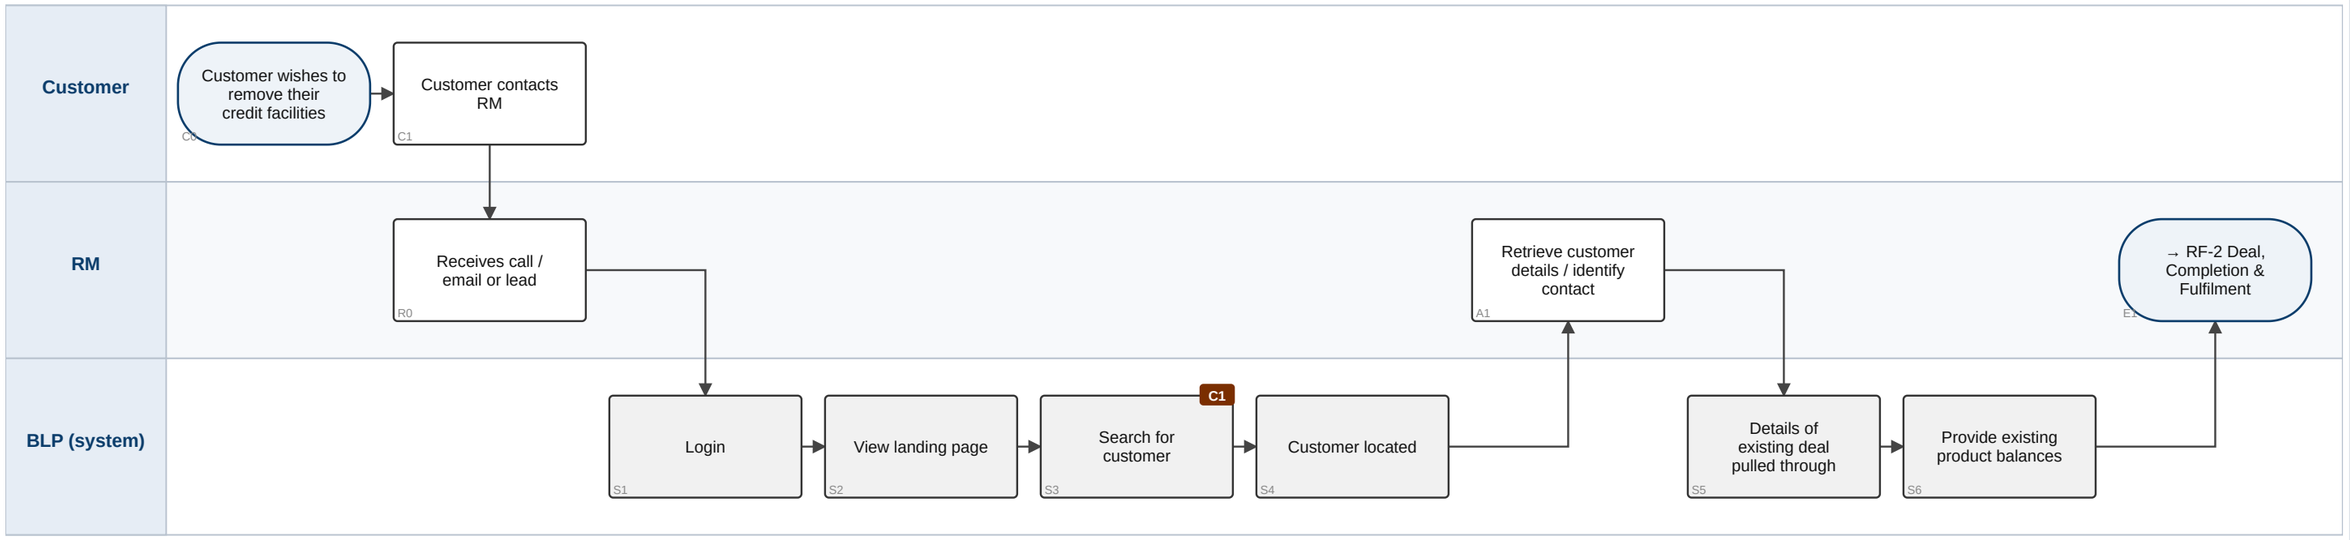

- What share of variations require a signed letter, and what share require Fulfilment action?

L4 step table

ID	Lane	Step	Type	Control	Wait	Note / as-is detail
R1	RM	Completing deal	Start			
R2	RM	Trigger facility letter (FAL)	Manual			
R3	RM	RM advises Lending Services to prepare security (EX-05)	Sub-process			
S1	BLP (system)	FAL created and copy stored	System			
S2	BLP (system)	FAL sent by post or secure email (manual PDF by RM)	System		●	Manual issuance by RM; no sent/returned tracking in BLP
C1	Customer	Customer signs and returns facility letter if required	Manual		●	Longest customer-side wait; 3-month unreturned reset
R4	RM	FAL checked	Manual	C8		C8: returned letter checked against issued terms
S3	BLP (system)	FAL updated as complete	System

F1	Fulfilment	Facility fulfilled	Manual	C11		C11: fulfilment against approved and documented terms
R6	RM	RM advised that facility fulfilled	Manual			
E1	BLP (system)	BLP updated	End			
D1	RM	Facility change required?	Decision			

RF-1 · Remove All Facilities · Lead & Customer

Source	Validation workshop	Status	Lanes
Source map p.10	WS-06	Draft for validation	Customer · RM · BLP (system)

Observations

- Mapped as a journey but not listed as a deal type in the RFP; presumably recorded as a Variation (H-B3).

Open questions for WS-06

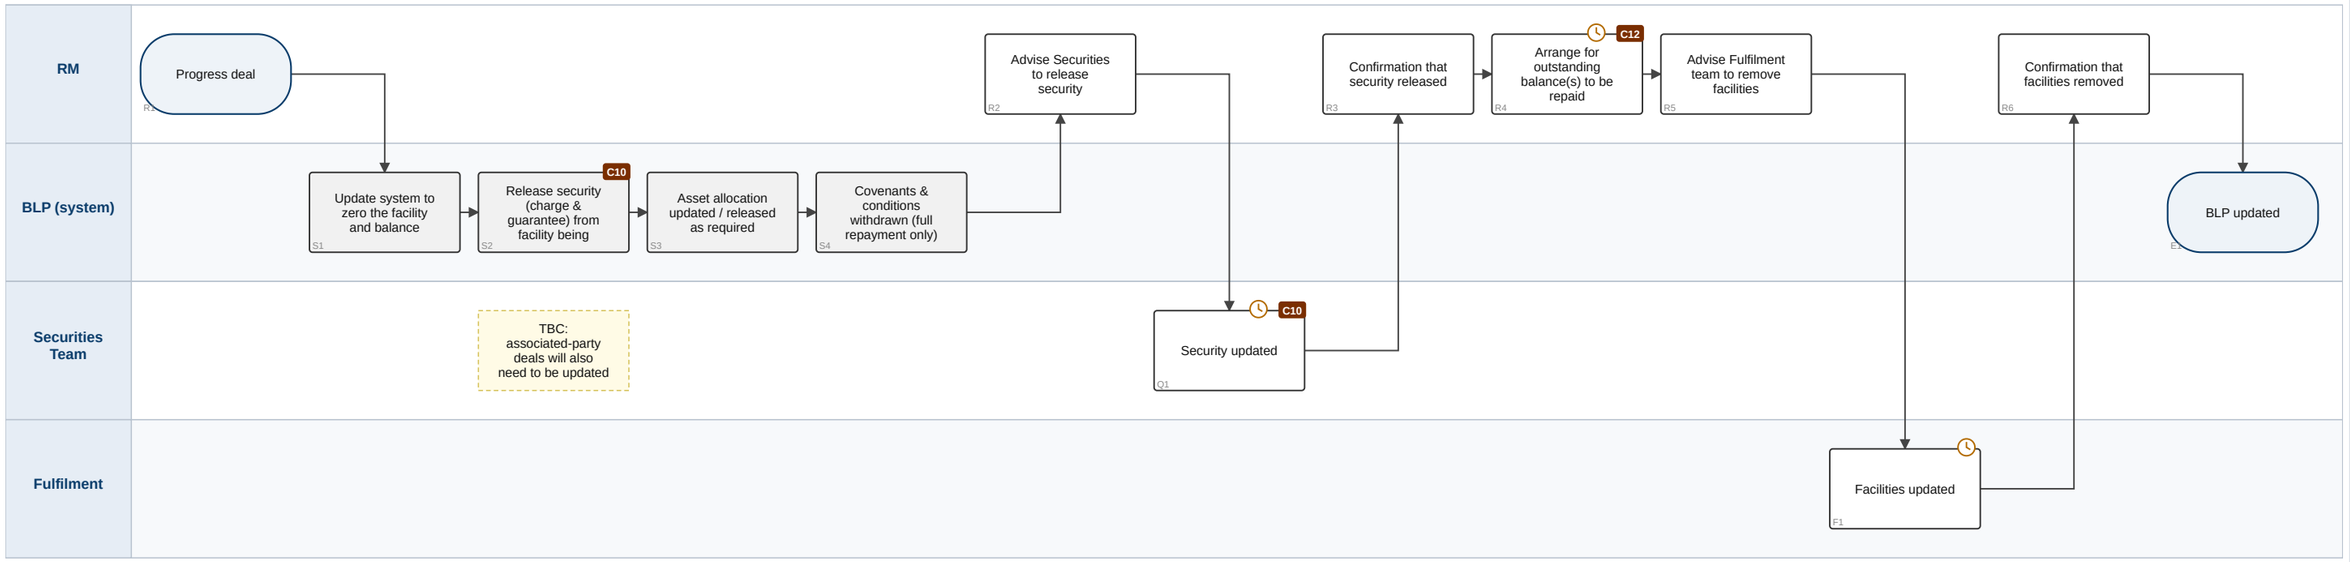

- Under which deal type is a full facility removal recorded today?
- Is bank-initiated removal (e.g. post-recovery) handled by the same path?

L4 step table

ID	Lane	Step	Type	Control	Wait	Note / as-is detail
C0	Customer	Customer wishes to remove their credit facilities	Start			
C1	Customer	Customer contacts RM	Manual			
R0	RM	Receives call / email or lead	Manual			
S1	BLP (system)	Login	System			Single sign-on not in place; separate BLP credentials
S2	BLP (system)	View landing page	System			Landing page does not surface work due (renewals, tasks)
S3	BLP (system)	Search for customer	System	C1		C1: customer identification via CIF number lookup
S4	BLP (system)	Customer located	System			
A1	RM	Retrieve customer details / identify contact	Manual			
S5	BLP (system)	Details of existing deal pulled through	System			
S6	BLP (system)	Provide existing product balances	System			
E1	RM	→ RF-2 Deal, Completion & Fulfilment	End			

RF-2 · Remove All Facilities · Deal, Completion & Fulfilment

Source	Validation workshop	Status	Lanes
Source map p.11	WS-06	Draft for validation	RM · BLP (system) · Securities Team · Fulfilment

Observations

- No Credit involvement: facility removal is treated as administrative, which is reasonable, but the source shows no check that the customer has no other exposure depending on the released security.
- Security is released in BLP (S2) before the Securities Team confirms release (Q1): the system record leads the legal reality.
- Two sequential hand-offs (Securities, Fulfilment) each with a confirmation back to the RM: four messages for one outcome.

Open questions for WS-06

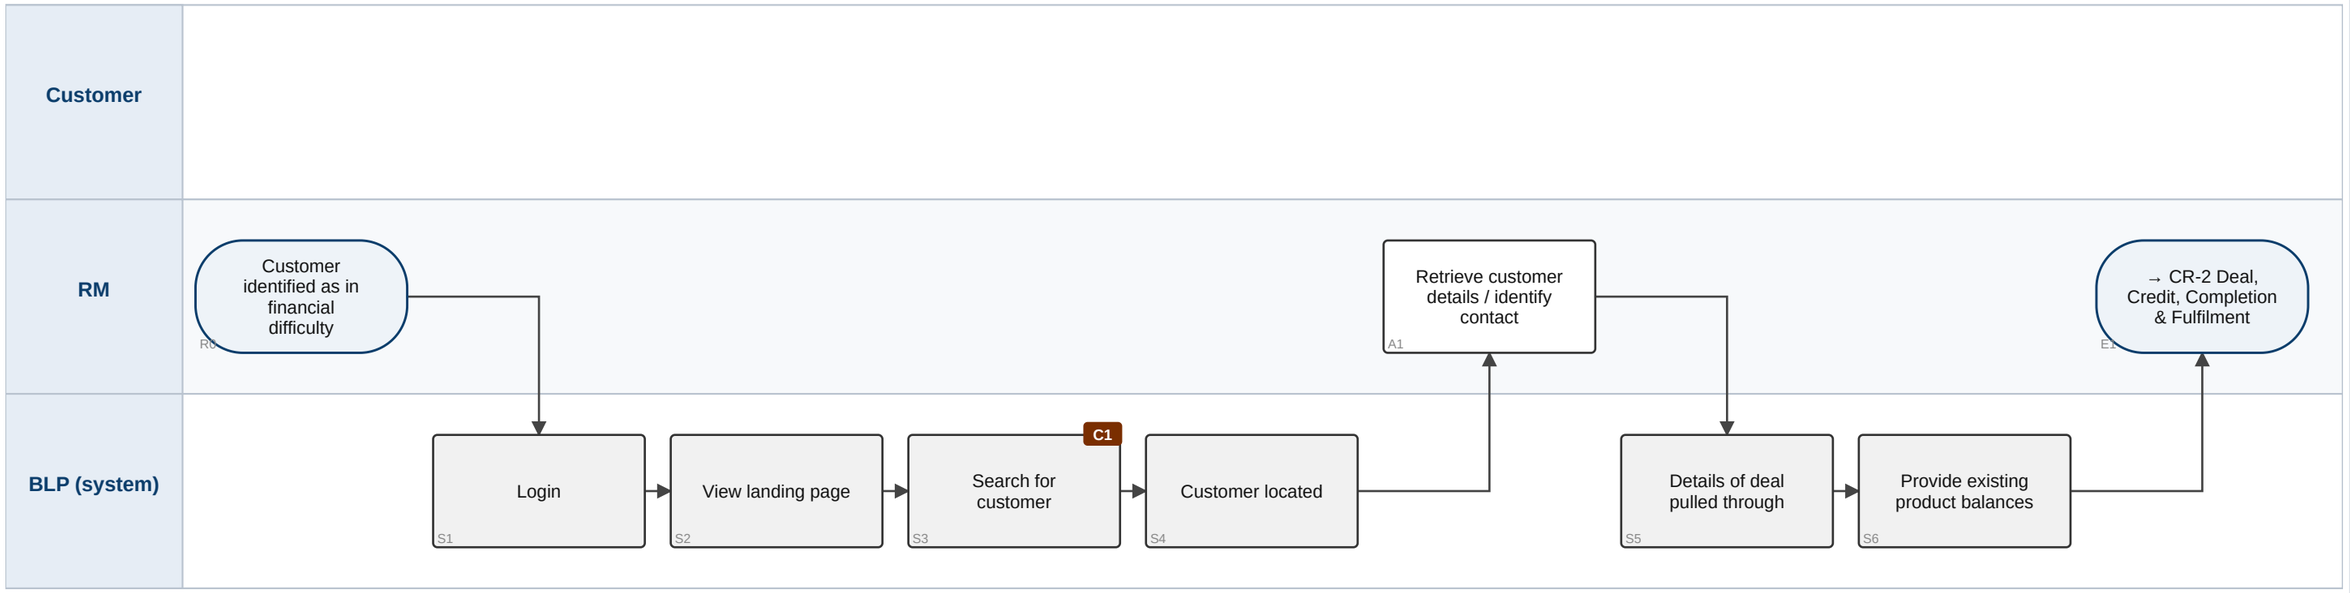

- Is the order (system release before physical release) correct, or a drawing artefact?
- How are associated-party deals updated today when a facility is removed? (source: TBC)

L4 step table

ID	Lane	Step	Type	Control	Wait	Note / as-is detail
R1	RM	Progress deal	Start			
S1	BLP (system)	Update system to zero the facility and balance	System			
S2	BLP (system)	Release security (charge & guarantee) from facility being repaid	System	C10		Only if security supports this facility alone; shared security must be re-allocated
S3	BLP (system)	Asset allocation updated / released as required	System			
S4	BLP (system)	Covenants & conditions withdrawn (full repayment only)	System			
R2	RM	Advise Securities to release security	Manual			
Q1	Securities Team	Security updated	Manual	C10	●	
R3	RM	Confirmation that security released	Manual			
R4	RM	Arrange for outstanding balance(s) to be repaid	Manual	C12	●	C12: repayment before facility removal
R5	RM	Advise Fulfilment team to remove facilities	Manual			
F1	Fulfilment	Facilities updated	Manual		●	
R6	RM	Confirmation that facilities removed	Manual			
E1	BLP (system)	BLP updated	End			
Notes on source map: TBC: associated-party deals will also need to be updated						

CR-1 · CAP Referral · Lead & Customer

Source	Validation workshop	Status	Lanes
Source map p.12	WS-07	Draft for validation	Customer · RM · BLP (system)

Observations

- Same deal-start sequence as every other journey (H-B1).
- The distress trigger is undefined; H-E3/L10 assume early-warning data exists in BLP (forbearance, watch-list, arrears).

Open questions for WS-07

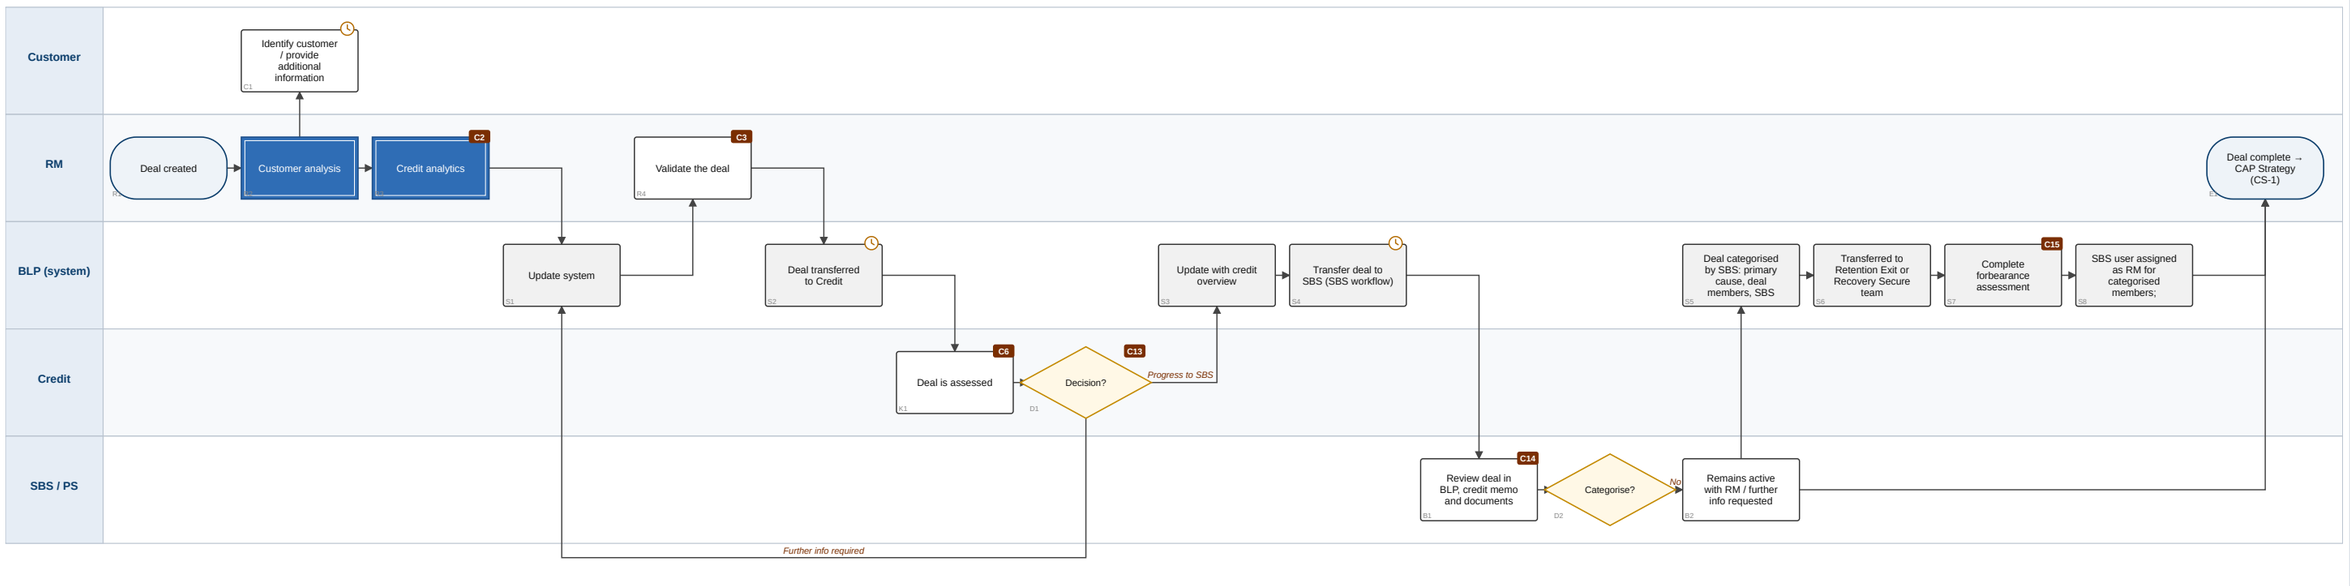

- What proportion of CAP Referrals originate from the RM vs. from Credit during another deal (in-flight, EX-04)?

L4 step table

ID	Lane	Step	Type	Control	Wait	Note / as-is detail
R0	RM	Customer identified as in financial difficulty	Start			Trigger: RM judgement, arrears, covenant breach, or Credit flag; not systematised
S1	BLP (system)	Login	System			Single sign-on not in place; separate BLP credentials
S2	BLP (system)	View landing page	System			Landing page does not surface work due (renewals, tasks)
S3	BLP (system)	Search for customer	System	C1		C1: customer identification via CIF number lookup
S4	BLP (system)	Customer located	System			
A1	RM	Retrieve customer details / identify contact	Manual			
S5	BLP (system)	Details of deal pulled through	System			
S6	BLP (system)	Provide existing product balances	System			
E1	RM	→ CR-2 Deal, Credit, Completion & Fulfilment	End			

CR-2 · CAP Referral · Deal, Credit, Completion & Fulfilment

Source	Validation workshop	Status	Lanes
Source map p.13	WS-07	Draft for validation	Customer · RM · BLP (system) · Credit · SBS / PS

Observations

- Two sequential approval authorities (Credit, then SBS) each review the same memo before anything changes for the customer; cycle time from distress signal to categorisation is the KPI for L10.
- Reassigning the officer code to an SBS user is a system update; the mass officer-code batch job suggests this is done in bulk elsewhere too.
- The forbearance assessment (C15) is a regulatory control and a protected data point (0.7 DR-10).

Open questions for WS-07

- What is the elapsed time from referral creation to SBS categorisation?
- Does SBS ever reject a referral that Credit approved, and what happens then?

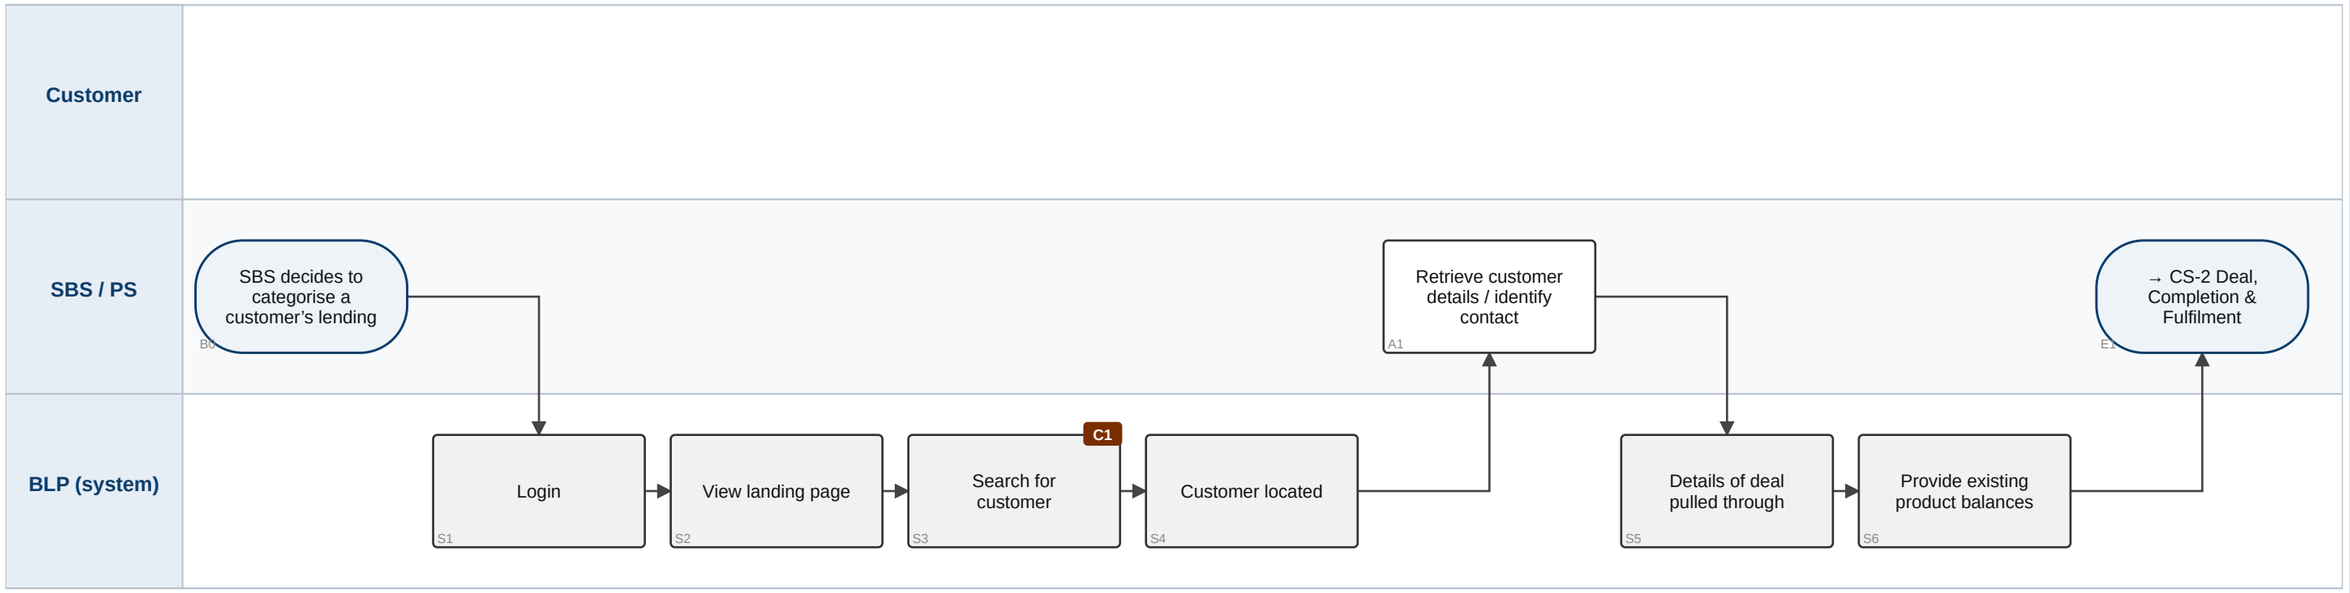

L4 step table

ID	Lane	Step	Type	Control	Wait	Note / as-is detail
R1	RM	Deal created	Start			
R2	RM	Customer analysis	Sub-process			
C1	Customer	Identify customer / provide additional information	Manual		●	
R3	RM	Credit analytics	Sub-process	C2		
S1	BLP (system)	Update system	System			
R4	RM	Validate the deal	Manual	C3		
S2	BLP (system)	Deal transferred to Credit	System		●	
K1	Credit	Deal is assessed	Manual	C6		
D1	Credit	Decision?	Decision	C13		C13: credit approval authority decides whether referral proceeds to SBS/PS
S3	BLP (system)	Update with credit overview	System			
S4	BLP (system)	Transfer deal to SBS (SBS workflow)	System		●	
B1	SBS / PS	Review deal in BLP, credit memo and documents	Manual	C14		C14: SBS categorisation decision
D2	SBS / PS	Categorise?	Decision			
B2	SBS / PS	Remains active with RM / further info requested	Manual			
S5	BLP (system)	Deal categorised by SBS: primary cause, deal members, SBS comments, saved Complete	System			
S6	BLP (system)	Transferred to Retention Exit or Recovery Secure team	System			

S7	BLP (system)	Complete forbearance assessment	System	C15		C15: forbearance assessment (regulatory)
S8	BLP (system)	SBS user assigned as RM for categorised members; recommendations recorded	System			Officer-code reassignment; cf. batch job
E1	RM	Deal complete → CAP Strategy (CS-1)	End			

CS-1 · CAP Strategy · Lead & Customer

Source	Validation workshop	Status	Lanes
Source map p.14	WS-08	Draft for validation	Customer · SBS / PS · BLP (system)

Observations

- Same deal-start sequence with SBS as the actor; created only after a CAP Referral is accepted.

Open questions for WS-08

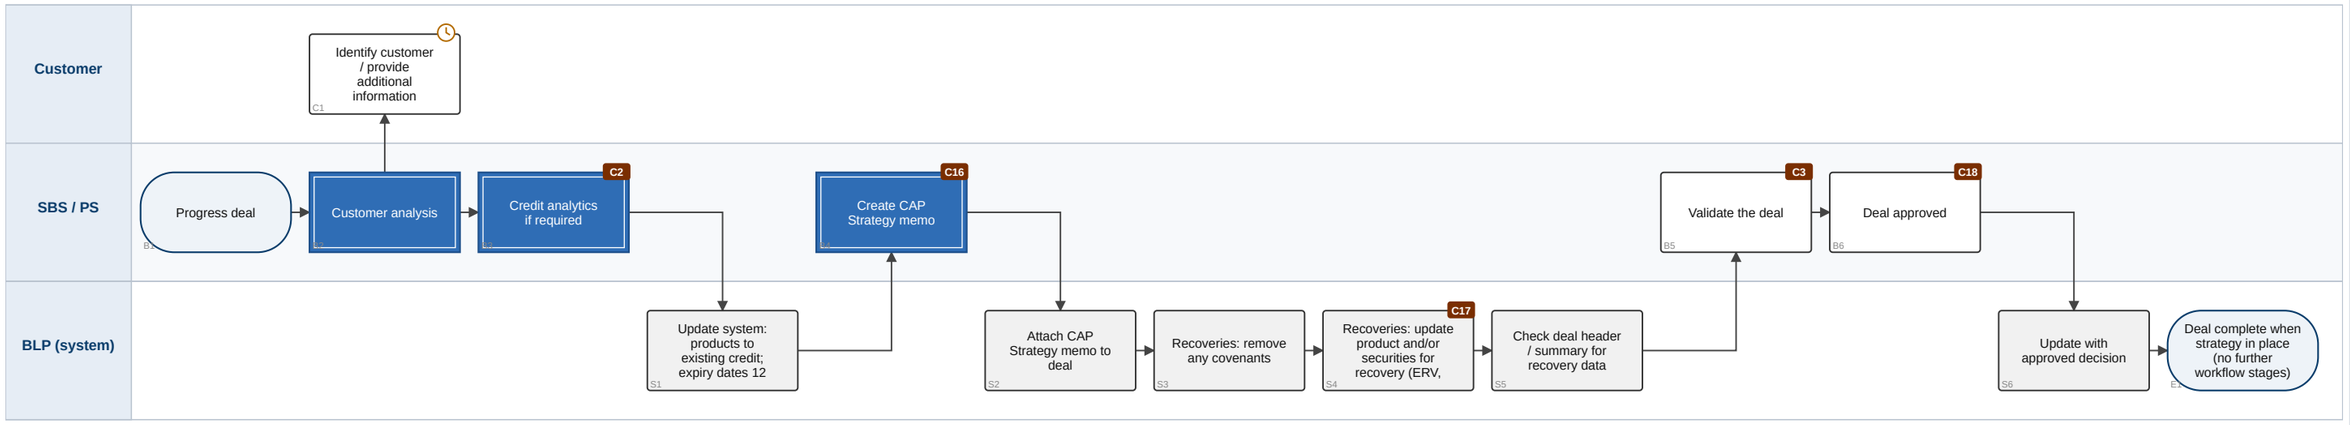

- Is a CAP Strategy ever created without a preceding CAP Referral deal?

L4 step table

ID	Lane	Step	Type	Control	Wait	Note / as-is detail
B0	SBS / PS	SBS decides to categorise a customer's lending	Start			
S1	BLP (system)	Login	System			Single sign-on not in place; separate BLP credentials
S2	BLP (system)	View landing page	System			Landing page does not surface work due (renewals, tasks)
S3	BLP (system)	Search for customer	System	C1		C1: customer identification via CIF number lookup
S4	BLP (system)	Customer located	System			
A1	SBS / PS	Retrieve customer details / identify contact	Manual			
S5	BLP (system)	Details of deal pulled through	System			
S6	BLP (system)	Provide existing product balances	System			
E1	SBS / PS	→ CS-2 Deal, Completion & Fulfilment	End			

CS-2 · CAP Strategy · Deal, Completion & Fulfilment

Source	Validation workshop	Status	Lanes
Source map p.15	WS-08	Draft for validation	Customer · SBS / PS · BLP (system)

Observations

- Approved by SBS within its own authority; no Credit lane. The CAP Strategy deal stops after approval: no completion or fulfilment stages, which is correct for a record-keeping deal.
- ERV, provisions and write-off data entered here (C17) feed impairment and regulatory reporting: protected fields.

Open questions for WS-08

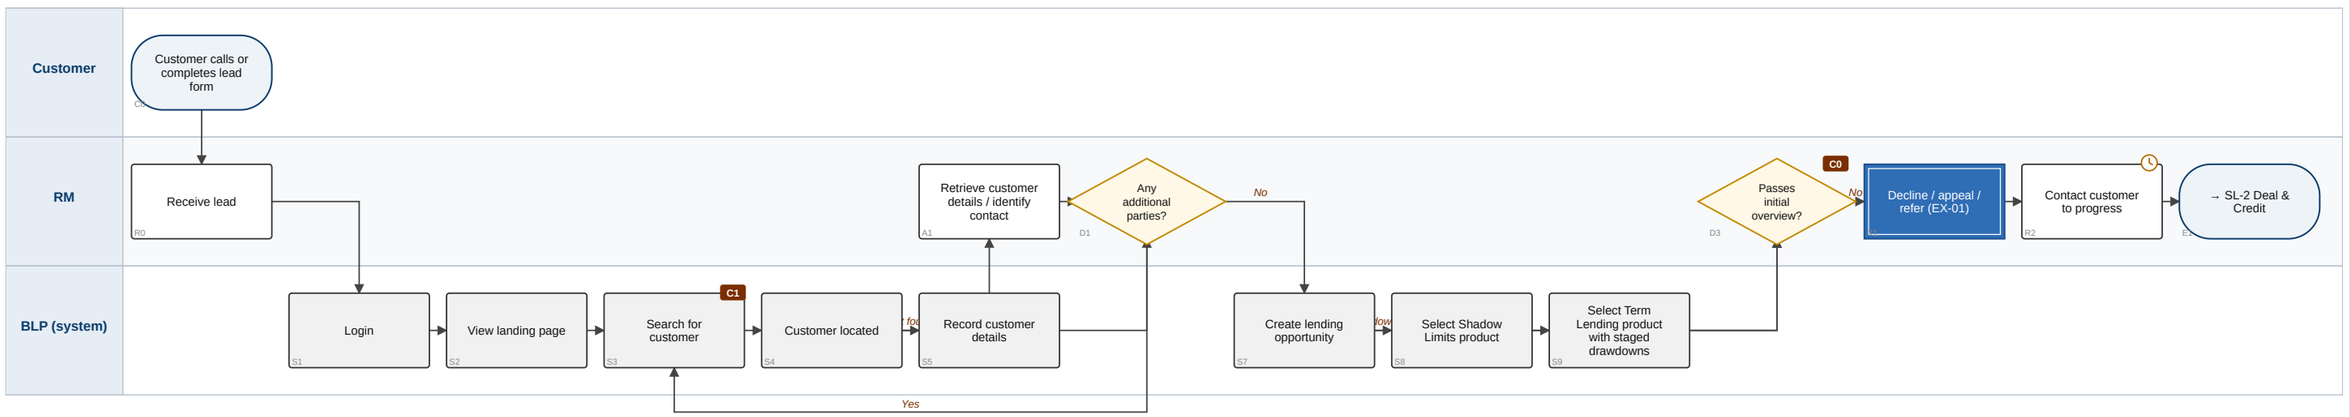

- Who holds the approval authority for a CAP Strategy, and is there a value threshold that escalates it?

L4 step table

ID	Lane	Step	Type	Control	Wait	Note / as-is detail
B1	SBS / PS	Progress deal	Start			
B2	SBS / PS	Customer analysis	Sub-process			
C1	Customer	Identify customer / provide additional information	Manual		●	
B3	SBS / PS	Credit analytics if required	Sub-process	C2		
S1	BLP (system)	Update system: products to existing credit; expiry dates 12 months; limits may be reduced	System			
B4	SBS / PS	Create CAP Strategy memo	Sub-process	C16		C16: strategy memo (document held off-platform until attached)
S2	BLP (system)	Attach CAP Strategy memo to deal	System			
S3	BLP (system)	Recoveries: remove any covenants	System			
S4	BLP (system)	Recoveries: update product and/or securities for recovery (ERV, provisions / write-offs)	System	C17		C17: ERV and provision data; feeds impairment reporting
S5	BLP (system)	Check deal header / summary for recovery data	System			
B5	SBS / PS	Validate the deal	Manual	C3		
B6	SBS / PS	Deal approved	Manual	C18		C18: SBS approval authority
S6	BLP (system)	Update with approved decision	System			
E1	BLP (system)	Deal complete when strategy in place (no further workflow stages)	End			

SL-1 · Shadow Limit & Staged Drawdown (origination) · Lead, Customer, Opportunity & Product

Source	Validation workshop	Status	Lanes
Source map p.16	WS-09	Draft for validation	Customer · RM · BLP (system)

Observations

- Identical to NM-1 up to product selection; the only difference is which product is picked. This is a New Money deal with a different product (H-B2).
- Staged Drawdown as a deal type had zero volume in 12 months; drawdowns are set up here as tranches on a Term Lending product, which is why the separate type is unused (H-B3).

Open questions for WS-09

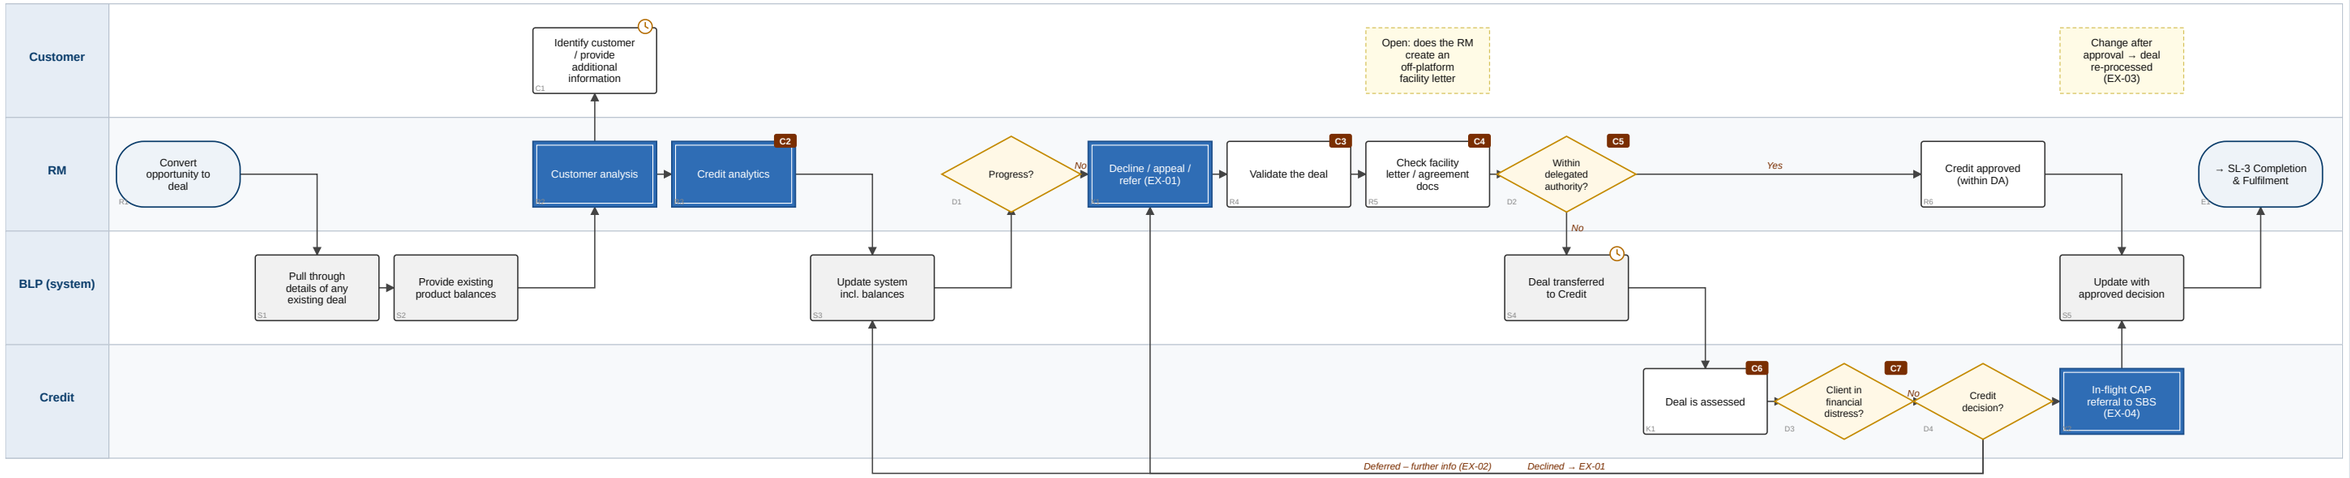

- Is the “Staged Drawdown” deal type retired in practice, with tranches always set up through Term Lending?

L4 step table

ID	Lane	Step	Type	Control	Wait	Note / as-is detail
C0	Customer	Customer calls or completes lead form	Start			
R0	RM	Receive lead	Manual			
S1	BLP (system)	Login	System			Single sign-on not in place; separate BLP credentials
S2	BLP (system)	View landing page	System			Landing page does not surface work due (renewals, tasks)
S3	BLP (system)	Search for customer	System	C1		C1: customer identification via CIF number lookup
S4	BLP (system)	Customer located	System			
A1	RM	Retrieve customer details / identify contact	Manual			
S5	BLP (system)	Record customer details	System			
D1	RM	Any additional parties?	Decision			
S7	BLP (system)	Create lending opportunity	System			
S8	BLP (system)	Select Shadow Limits product	System			RM agrees an overall facility amount; final products chosen later, total ≤ shadow limit
S9	BLP (system)	Select Term Lending product with staged drawdowns	System			RM enters each stage: date, amount, status; total reduces with each stage
D3	RM	Passes initial overview?	Decision	C0		
X1	RM	Decline / appeal / refer (EX-01)	Sub-process			
R2	RM	Contact customer to progress	Manual		●	
E1	RM	→ SL-2 Deal & Credit	End			

SL-2 · Shadow Limit & Staged Drawdown (origination) · Deal & Credit

Source	Validation workshop	Status	Lanes
Source map p.17	WS-09	Draft for validation	Customer · RM · BLP (system) · Credit

Observations

- Same Deal & Credit flow as New Money.
- The source raises, in red, whether the facility letter is created off-platform for Shadow Limits and confirms it is for Staged Drawdown: the platform does not hold the agreed terms (H-D2).

Open questions for WS-09

- Where are off-platform facility letters stored, and who checks them against the approved deal?

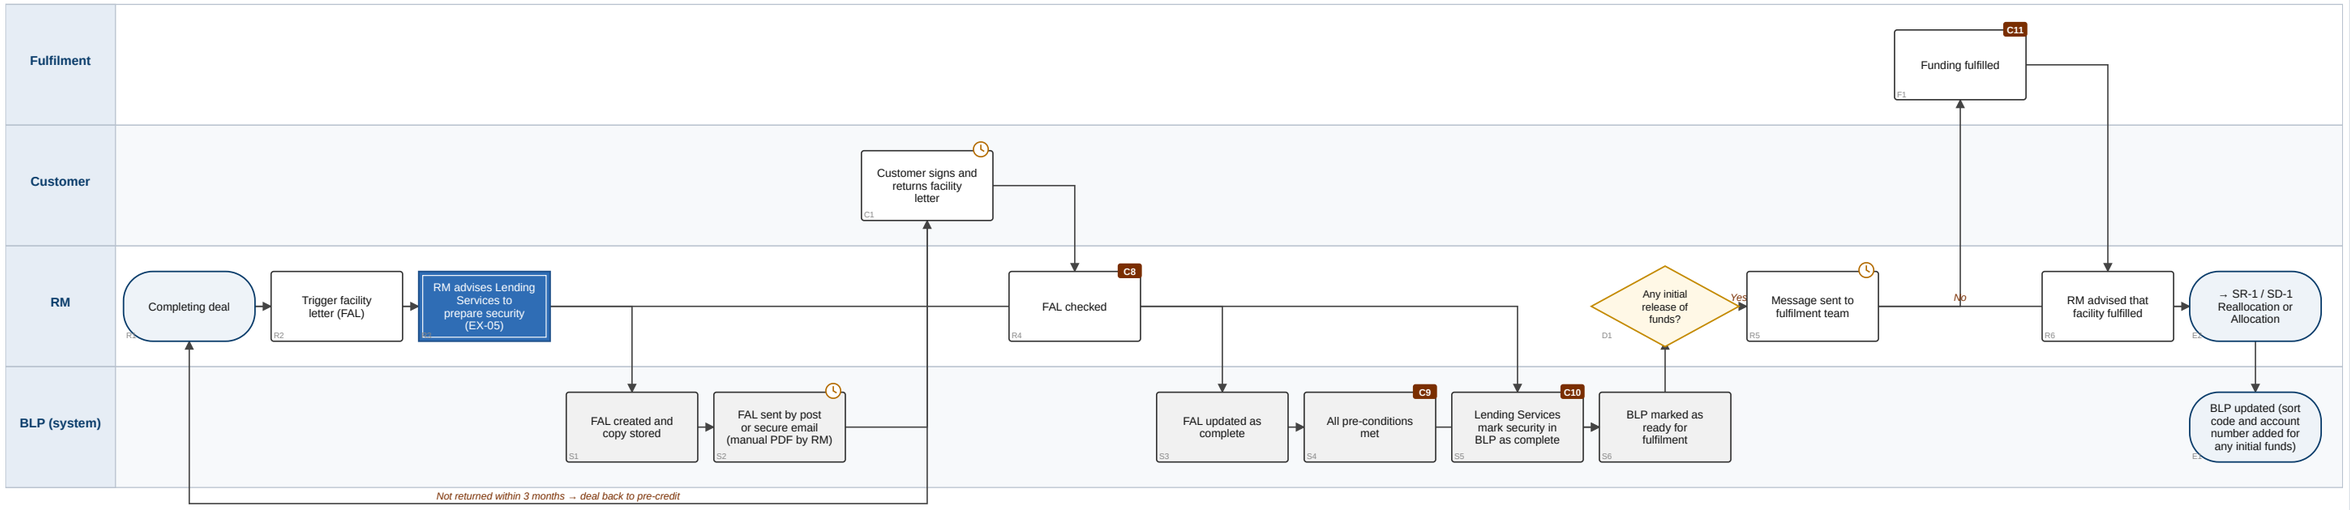

L4 step table

ID	Lane	Step	Type	Control	Wait	Note / as-is detail
R1	RM	Convert opportunity to deal	Start			
S1	BLP (system)	Pull through details of any existing deal	System			
S2	BLP (system)	Provide existing product balances	System			Balances sourced from MEO / IMPACS; latency TBC
R2	RM	Customer analysis	Sub-process			
C1	Customer	Identify customer / provide additional information	Manual		●	Customer-side wait; no system tracking of requests
R3	RM	Credit analytics	Sub-process	C2		C2: ECRS classification, lending category, debt servicing, credit memo, external credit integrity checks
S3	BLP (system)	Update system incl. balances	System			
D1	RM	Progress?	Decision			
X1	RM	Decline / appeal / refer (EX-01)	Sub-process			
R4	RM	Validate the deal	Manual	C3		C3: deal validation (completeness, mandatory fields)
R5	RM	Check facility letter / agreement docs	Manual	C4		C4: document check against approved terms
D2	RM	Within delegated authority?	Decision	C5		C5: delegated-authority check, performed manually
S4	BLP (system)	Deal transferred to Credit	System		●	Queue wait at Credit
K1	Credit	Deal is assessed	Manual	C6		C6: independent credit assessment
D3	Credit	Client in financial distress?	Decision	C7		C7: distress screen; existing-customer deals only
D4	Credit	Credit decision?	Decision			
X2	Credit	In-flight CAP referral to SBS (EX-04)	Sub-process			
R6	RM	Credit approved (within DA)	Manual			
S5	BLP (system)	Update with approved decision	System			
E1	RM	→ SL-3 Completion & Fulfilment	End			

Notes on source map: Open: does the RM create an off-platform facility letter for Shadow Limits? RMs use an off-platform FAL for Staged Drawdown · Change after approval → deal re-processed (EX-03)

SL-3 · Shadow Limit & Staged Drawdown (origination) · Completion & Fulfilment

Source	Validation workshop	Status	Lanes
Source map p.18	WS-09	Draft for validation	Fulfilment · Customer · RM · BLP (system)

Observations

- Same as New Money completion, plus a decision on initial funds: a shadow limit with no immediate drawdown ends here and waits for a Reallocation deal.

Open questions for WS-09

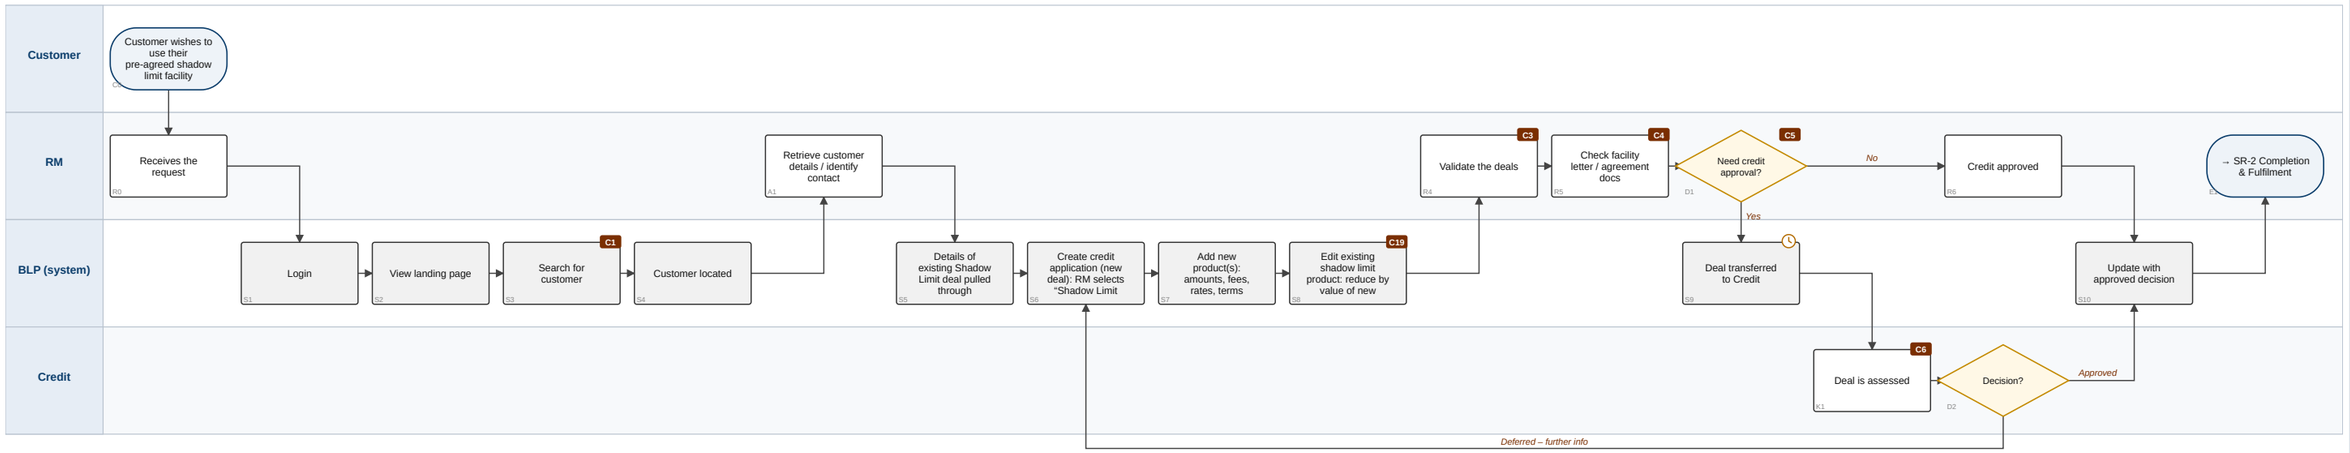

- How is the undrawn shadow limit monitored for expiry between origination and first reallocation?

L4 step table

ID	Lane	Step	Type	Control	Wait	Note / as-is detail
R1	RM	Completing deal	Start			
R2	RM	Trigger facility letter (FAL)	Manual			
R3	RM	RM advises Lending Services to prepare security (EX-05)	Sub-process			
S1	BLP (system)	FAL created and copy stored	System			
S2	BLP (system)	FAL sent by post or secure email (manual PDF by RM)	System		●	Manual issuance by RM; no sent/returned tracking in BLP
C1	Customer	Customer signs and returns facility letter	Manual		●	Longest customer-side wait; 3-month unreturned reset
R4	RM	FAL checked	Manual	C8		C8: returned letter checked against issued terms
S3	BLP (system)	FAL updated as complete	System			
S4	BLP (system)	All pre-conditions met	System	C9		C9: pre-conditions / CP checklist
S5	BLP (system)	Lending Services mark security in BLP as complete	System	C10		C10: security perfected before drawdown
S6	BLP (system)	BLP marked as ready for fulfilment	System			
R5	RM	Message sent to fulfilment team	Manual		●	Hand-off by message; queue at Fulfilment
F1	Fulfilment	Funding fulfilled	Manual	C11		C11: fulfilment against approved and documented terms
R6	RM	RM advised that facility fulfilled	Manual			
E1	BLP (system)	BLP updated (sort code and account number added for any initial funds)	End			
D1	RM	Any initial release of funds?	Decision			
E2	RM	→ SR-1 / SD-1 Reallocation or Allocation	End			

SR-1 · Shadow Limit Reallocation · Customer, Deal & Credit

Source	Validation workshop	Status	Lanes
Source map p.19	WS-10	Draft for validation	Customer · RM · BLP (system) · Credit

Observations

- A genuine fast-track: pre-approved limit, straight to PDQ, Credit only on material change. This is the model for risk-based routing (L1) already operating in the Bank at 62 deals a year.
- The RM reduces the shadow limit product manually (S8); C19 is a manual arithmetic check.
- The definition of "material change" that triggers Credit is not written on the map.

Open questions for WS-10

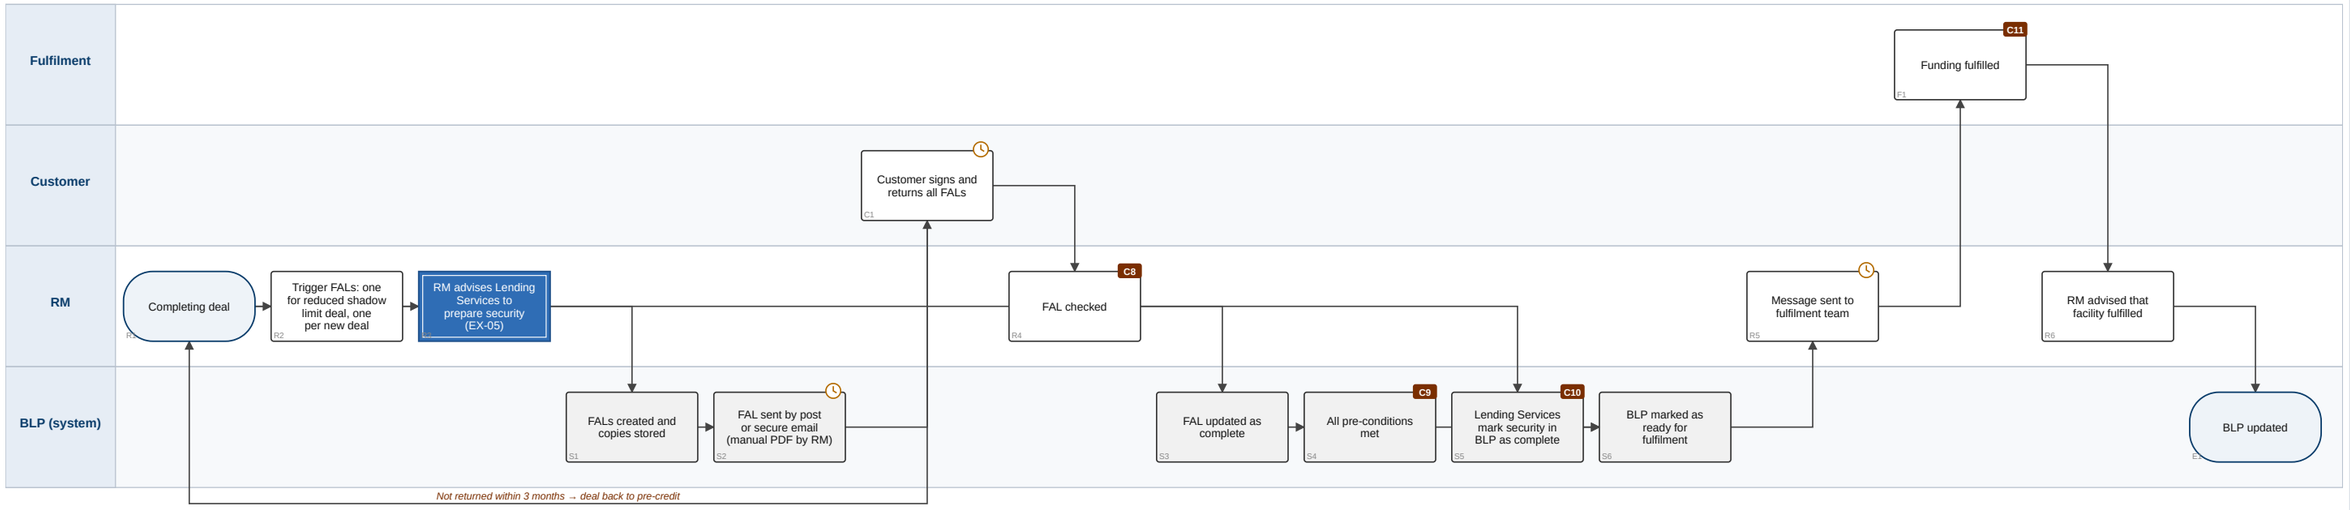

- What are the documented triggers for referring a reallocation to Credit?
- Is the reduction of the shadow limit (S8) ever missed, leaving double-counted headroom?

L4 step table

ID	Lane	Step	Type	Control	Wait	Note / as-is detail
C0	Customer	Customer wishes to use their pre-agreed shadow limit facility	Start			
R0	RM	Receives the request	Manual			
S1	BLP (system)	Login	System			Single sign-on not in place; separate BLP credentials
S2	BLP (system)	View landing page	System			Landing page does not surface work due (renewals, tasks)

S4	BLP (system)	Customer located	System			
A1	RM	Retrieve customer details / identify contact	Manual			
S5	BLP (system)	Details of existing Shadow Limit deal pulled through	System			
S6	BLP (system)	Create credit application (new deal): RM selects "Shadow Limit Reallocation"	System			
S7	BLP (system)	Add new product(s): amounts, fees, rates, terms	System			
S8	BLP (system)	Edit existing shadow limit product: reduce by value of new product(s)	System	C19		C19: reallocation ≤ remaining shadow limit
R4	RM	Validate the deals	Manual	C3		
R5	RM	Check facility letter / agreement docs	Manual	C4		
D1	RM	Need credit approval?	Decision	C5		Credit has approved the shadow limit; material change or specific scenarios need further approval. Skips CDQ, straight to PDQ (DCA 5)
S9	BLP (system)	Deal transferred to Credit	System		●	
K1	Credit	Deal is assessed	Manual	C6		
D2	Credit	Decision?	Decision			
R6	RM	Credit approved	Manual			
S10	BLP (system)	Update with approved decision	System			
E1	RM	→ SR-2 Completion & Fulfilment	End			

SR-2 · Shadow Limit Reallocation · Completion & Fulfilment

Source	Validation workshop	Status	Lanes
Source map p.20	WS-10	Draft for validation	Fulfilment · Customer · RM · BLP (system)

Observations

- Two or more facility letters per reallocation (reduced shadow limit plus each new facility), all manually issued, all subject to the 3-month reset.

Open questions for WS-10

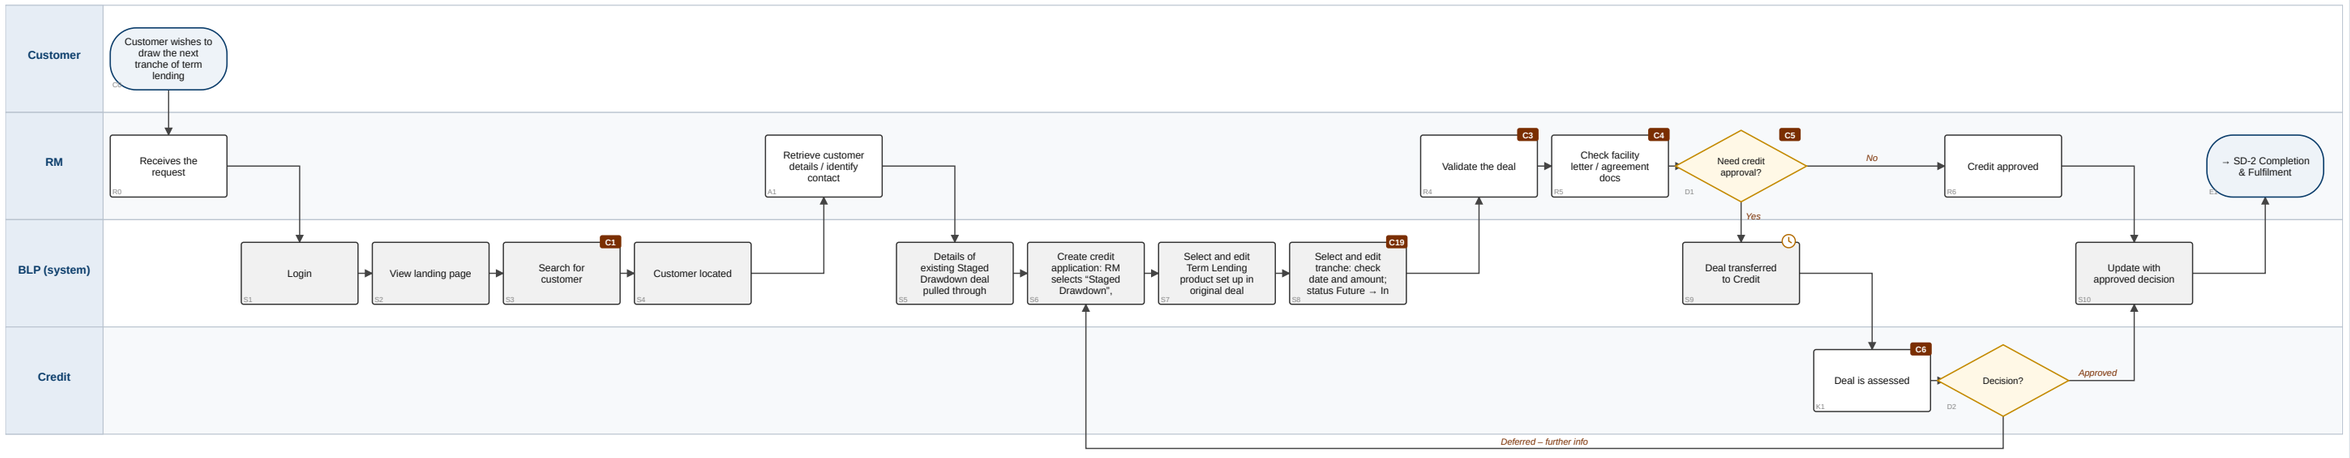

- Could the reduced shadow limit be documented by a side letter or notice rather than a full FAL?

L4 step table

ID	Lane	Step	Type	Control	Wait	Note / as-is detail
R1	RM	Completing deal	Start			
R2	RM	Trigger FALs: one for reduced shadow limit deal, one per new deal	Manual			
R3	RM	RM advises Lending Services to prepare security (EX-05)	Sub-process			
S1	BLP (system)	FALs created and copies stored	System			
S2	BLP (system)	FAL sent by post or secure email (manual PDF by RM)	System		●	Manual issuance by RM; no sent/returned tracking in BLP

SD-1 · Staged Drawdown Allocation · Customer, Deal & Credit

Source	Validation workshop	Status	Lanes
Source map p.21	WS-10	Draft for validation	Customer · RM · BLP (system) · Credit

Observations

- Structurally the same as Shadow Limit Reallocation: a pre-approved facility drawn in tranches, with Credit only on exception.
- The drawdown letter is produced off-platform; the tranche status change in BLP is the only system record of the drawdown.
- Deal type “Staged Drawdown” with facility request type “Variation”: the deal-type model is being worked around by combining fields.

Open questions for WS-10

- Is the repayment schedule regenerated at each tranche, and where? (source: open)
- Why is the facility request type set to Variation on an allocation?

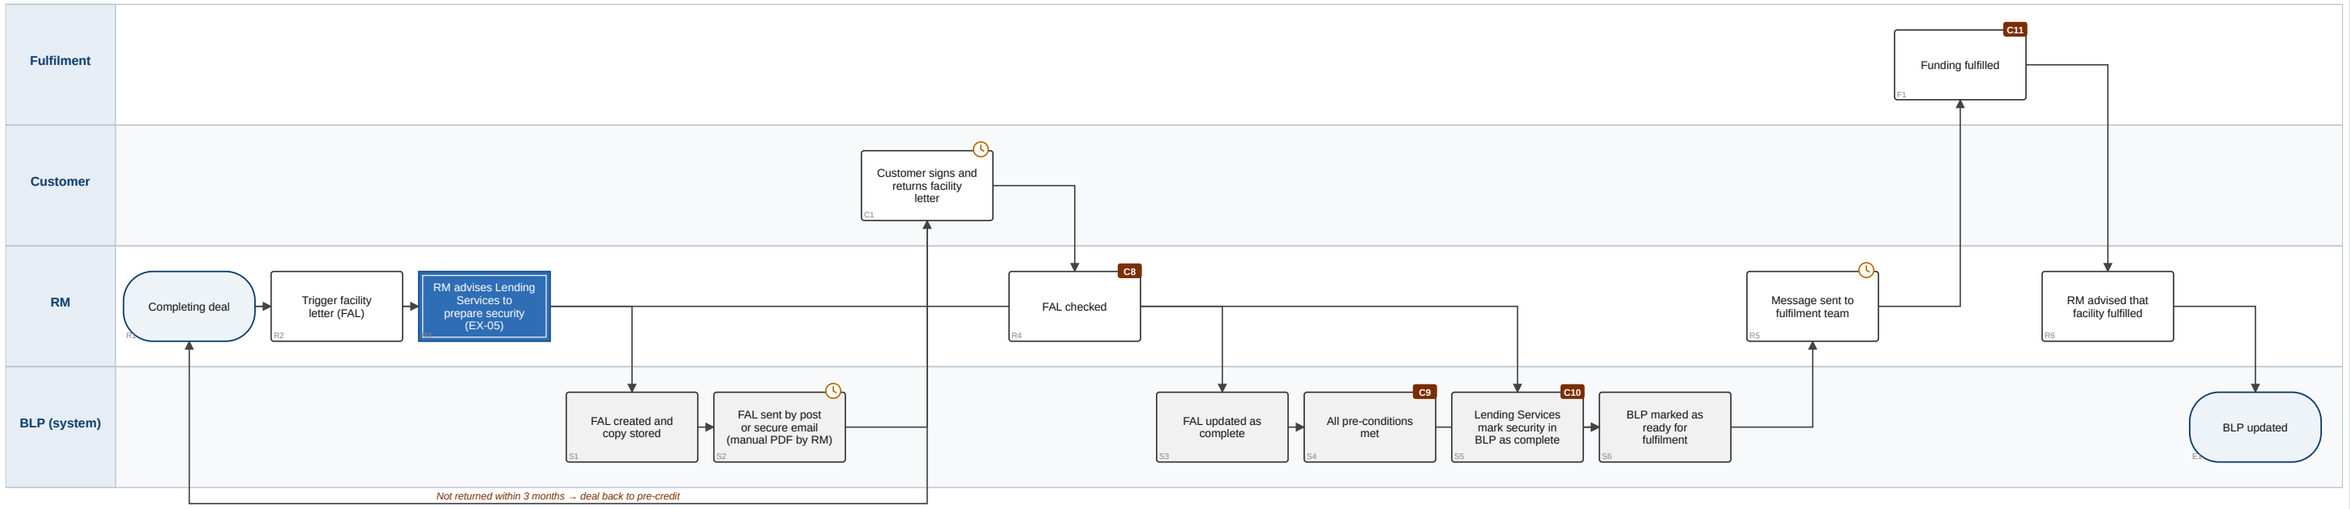

L4 step table

ID	Lane	Step	Type	Control	Wait	Note / as-is detail
C0	Customer	Customer wishes to draw the next tranche of term lending	Start			Could be triggered by a task date set when the staged drawdown deal was created
R0	RM	Receives the request	Manual			
S1	BLP (system)	Login	System			Single sign-on not in place; separate BLP credentials
S2	BLP (system)	View landing page	System			Landing page does not surface work due (renewals, tasks)
S3	BLP (system)	Search for customer	System	C1		C1: customer identification via CIF number lookup
S4	BLP (system)	Customer located	System			
A1	RM	Retrieve customer details / identify contact	Manual			
S5	BLP (system)	Details of existing Staged Drawdown deal pulled through	System			
S6	BLP (system)	Create credit application: RM selects “Staged Drawdown”, facility request type “Variation”	System			
S7	BLP (system)	Select and edit Term Lending product set up in original deal	System			
S8	BLP (system)	Select and edit tranche: check date and amount; status Future → In Progress	System	C19		
R4	RM	Validate the deal	Manual	C3		Open: does the RM need to produce a repayment schedule at each drawdown?
R5	RM	Check facility letter / agreement docs	Manual	C4		RM produces an off-platform staged drawdown letter as confirmation
D1	RM	Need credit approval?	Decision	C5		
S9	BLP (system)	Deal transferred to Credit	System		●	
K1	Credit	Deal is assessed	Manual	C6		
D2	Credit	Decision?	Decision			
R6	RM	Credit approved	Manual			

S10	BLP (system)	Update with approved decision	System			
E1	RM	→ SD-2 Completion & Fulfilment	End			

SD-2 · Staged Drawdown Allocation · Completion & Fulfilment

Source	Validation workshop	Status	Lanes
Source map p.22	WS-10	Draft for validation	Fulfilment · Customer · RM · BLP (system)

Observations

- Identical to New Money completion. The source draws the FAL steps in red, flagging that the letter is off-platform for this journey.

Open questions for WS-10

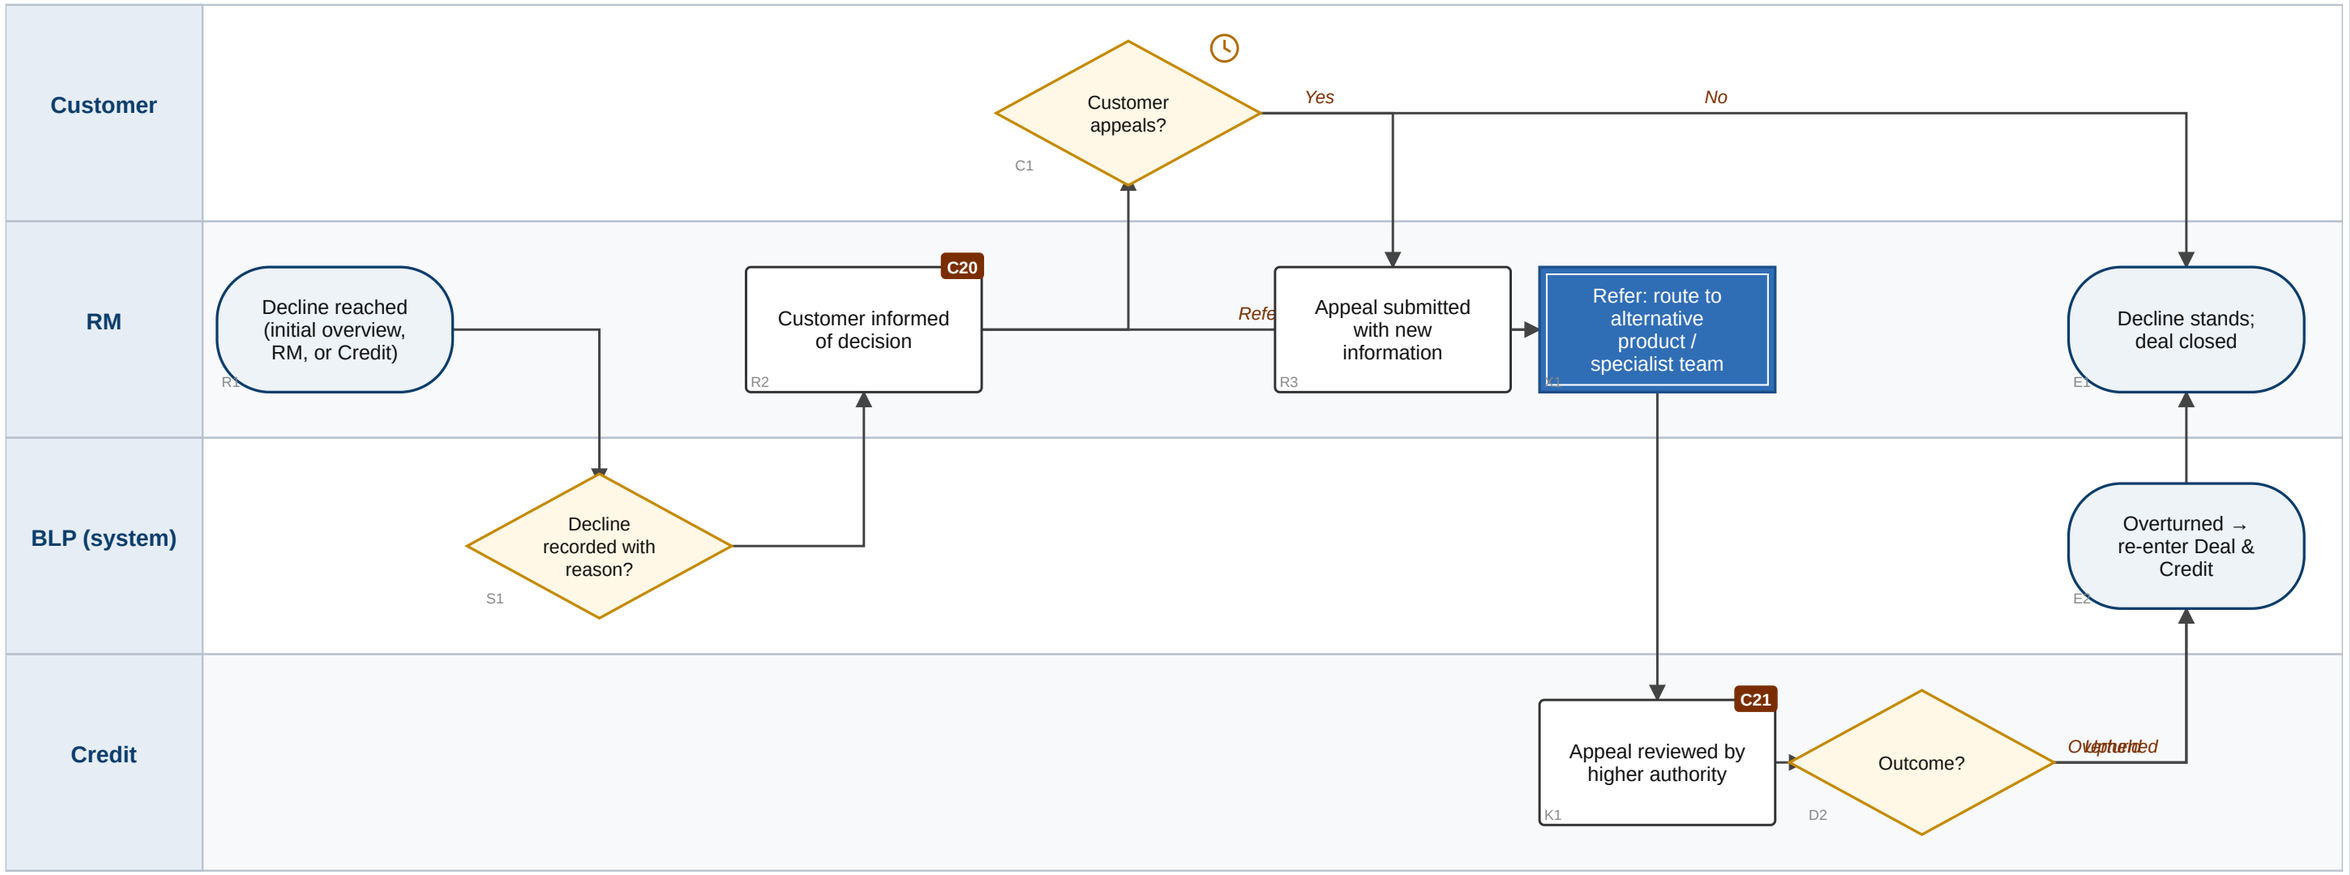

- Is a full FAL and 3-month reset proportionate for drawing a tranche of an already-documented facility?

L4 step table

ID	Lane	Step	Type	Control	Wait	Note / as-is detail
R1	RM	Completing deal	Start			
R2	RM	Trigger facility letter (FAL)	Manual

R6	RM	RM advised that facility fulfilled	Manual			
E1	BLP (system)	BLP updated	End			

EX-01 · Exception path · Decline / appeal / refer

Source	Validation workshop	Status	Lanes
Not mapped in source (blue sub-process box)	WS-11	**Straw-man – to be built in workshop**	Customer · RM · BLP (system) · Credit

Observations

- Straw-man. Shown on four source maps as a sub-process box with no detail. The workshop must establish: where decline reasons are recorded; whether an appeal route exists and who hears it; what “refer” means in practice.

Open questions for WS-11

- Is there a formal appeal process, and what is its volume?
- Are decline reasons captured in BLP in a structured way (needed for O4 and MI)?
- What does “refer” route to?

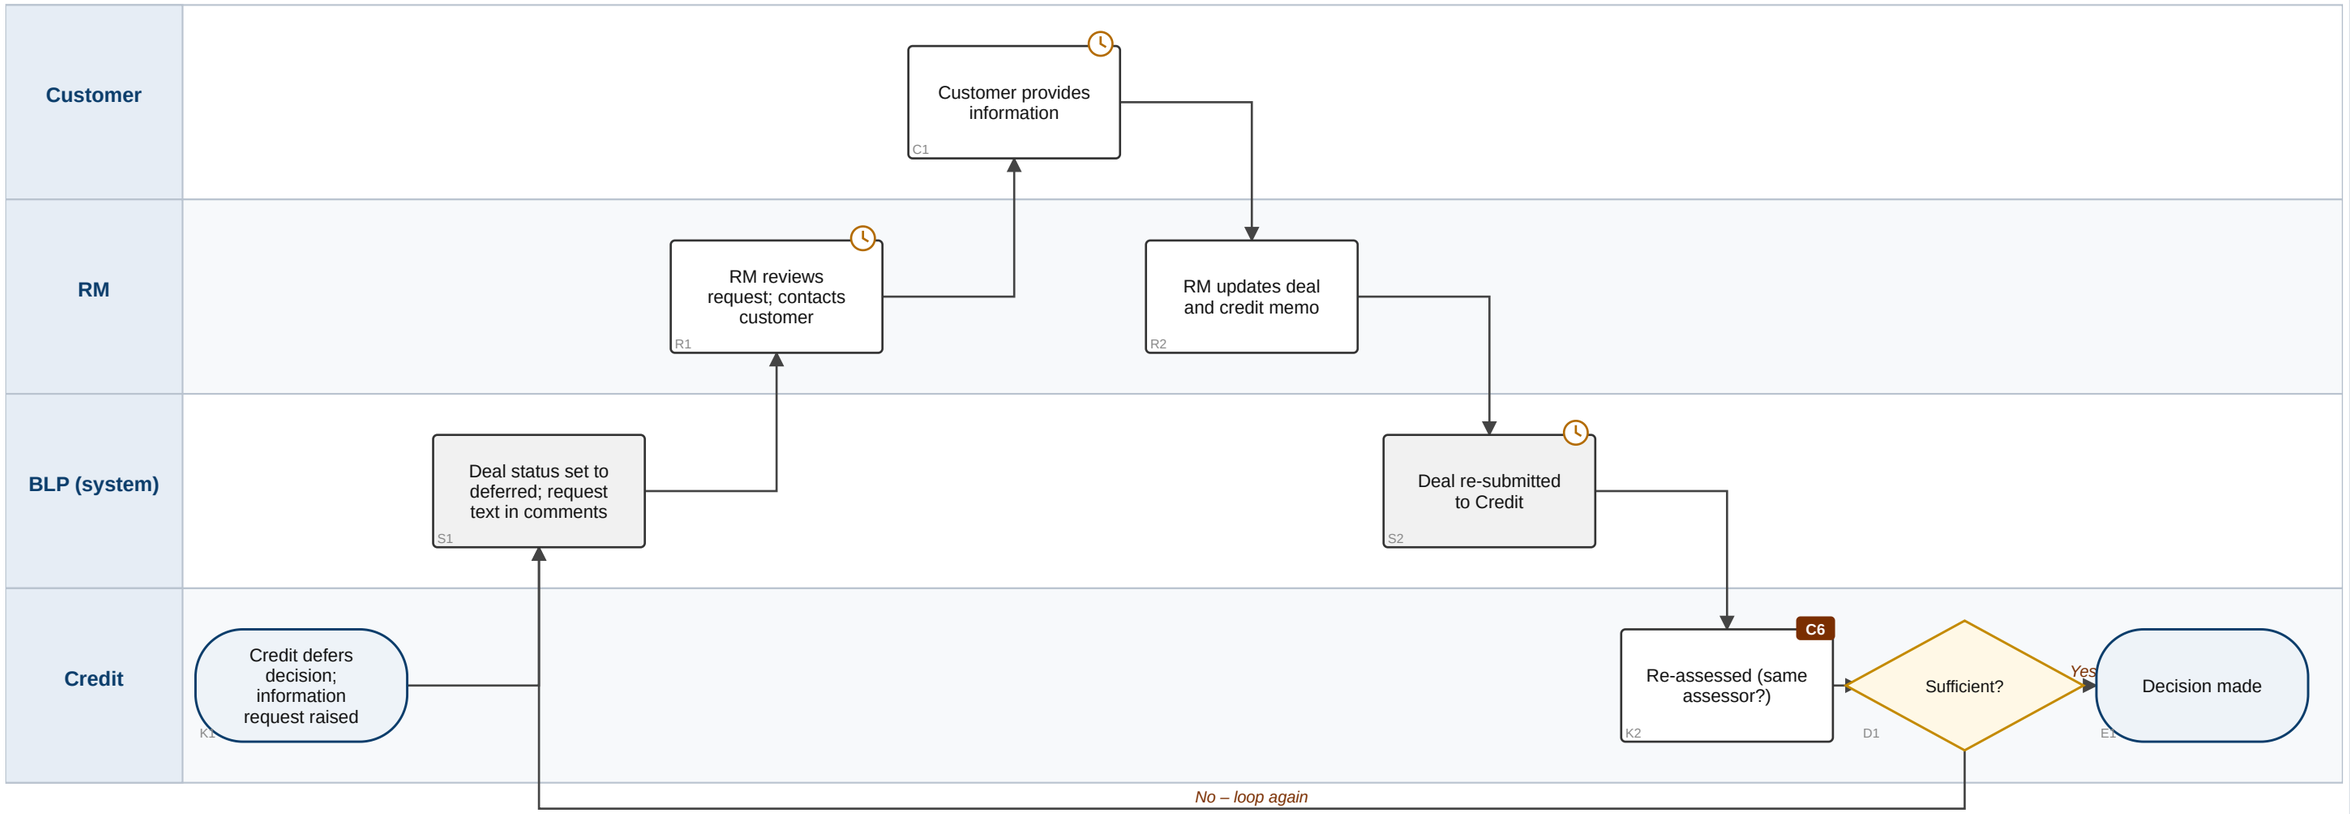

L4 step table

ID	Lane	Step	Type	Control	Wait	Note / as-is detail
R1	RM	Decline reached (initial overview, RM, or Credit)	Start			
S1	BLP (system)	Decline recorded with reason?	Decision			Unknown whether a structured reason code exists
R2	RM	Customer informed of decision	Manual	C20		C20: decline communication requirements (regulatory for some segments)
C1	Customer	Customer appeals?	Decision		●	
R3	RM	Appeal submitted with new information	Manual			
K1	Credit	Appeal reviewed by higher authority	Manual	C21		C21: appeal reviewed independently of original decision-maker
D2	Credit	Outcome?	Decision			

E1	RM	Decline stands; deal closed	End			
E2	BLP (system)	Overturned → re-enter Deal & Credit	End			
X1	RM	Refer: route to alternative product / specialist team	Sub-process			

EX-02 · Exception path · Deferred – further information required

Source	Validation workshop	Status	Lanes
Not mapped in source (loop-back arrow only)	WS-11	**Straw-man – to be built in workshop**	Customer · RM · BLP (system) · Credit

Observations

- Straw-man. Every Deal & Credit map has this loop with no count limit and no time limit. It is the most likely driver of H-C1 and should be measured from DR-02 before the workshop.

Open questions for WS-11

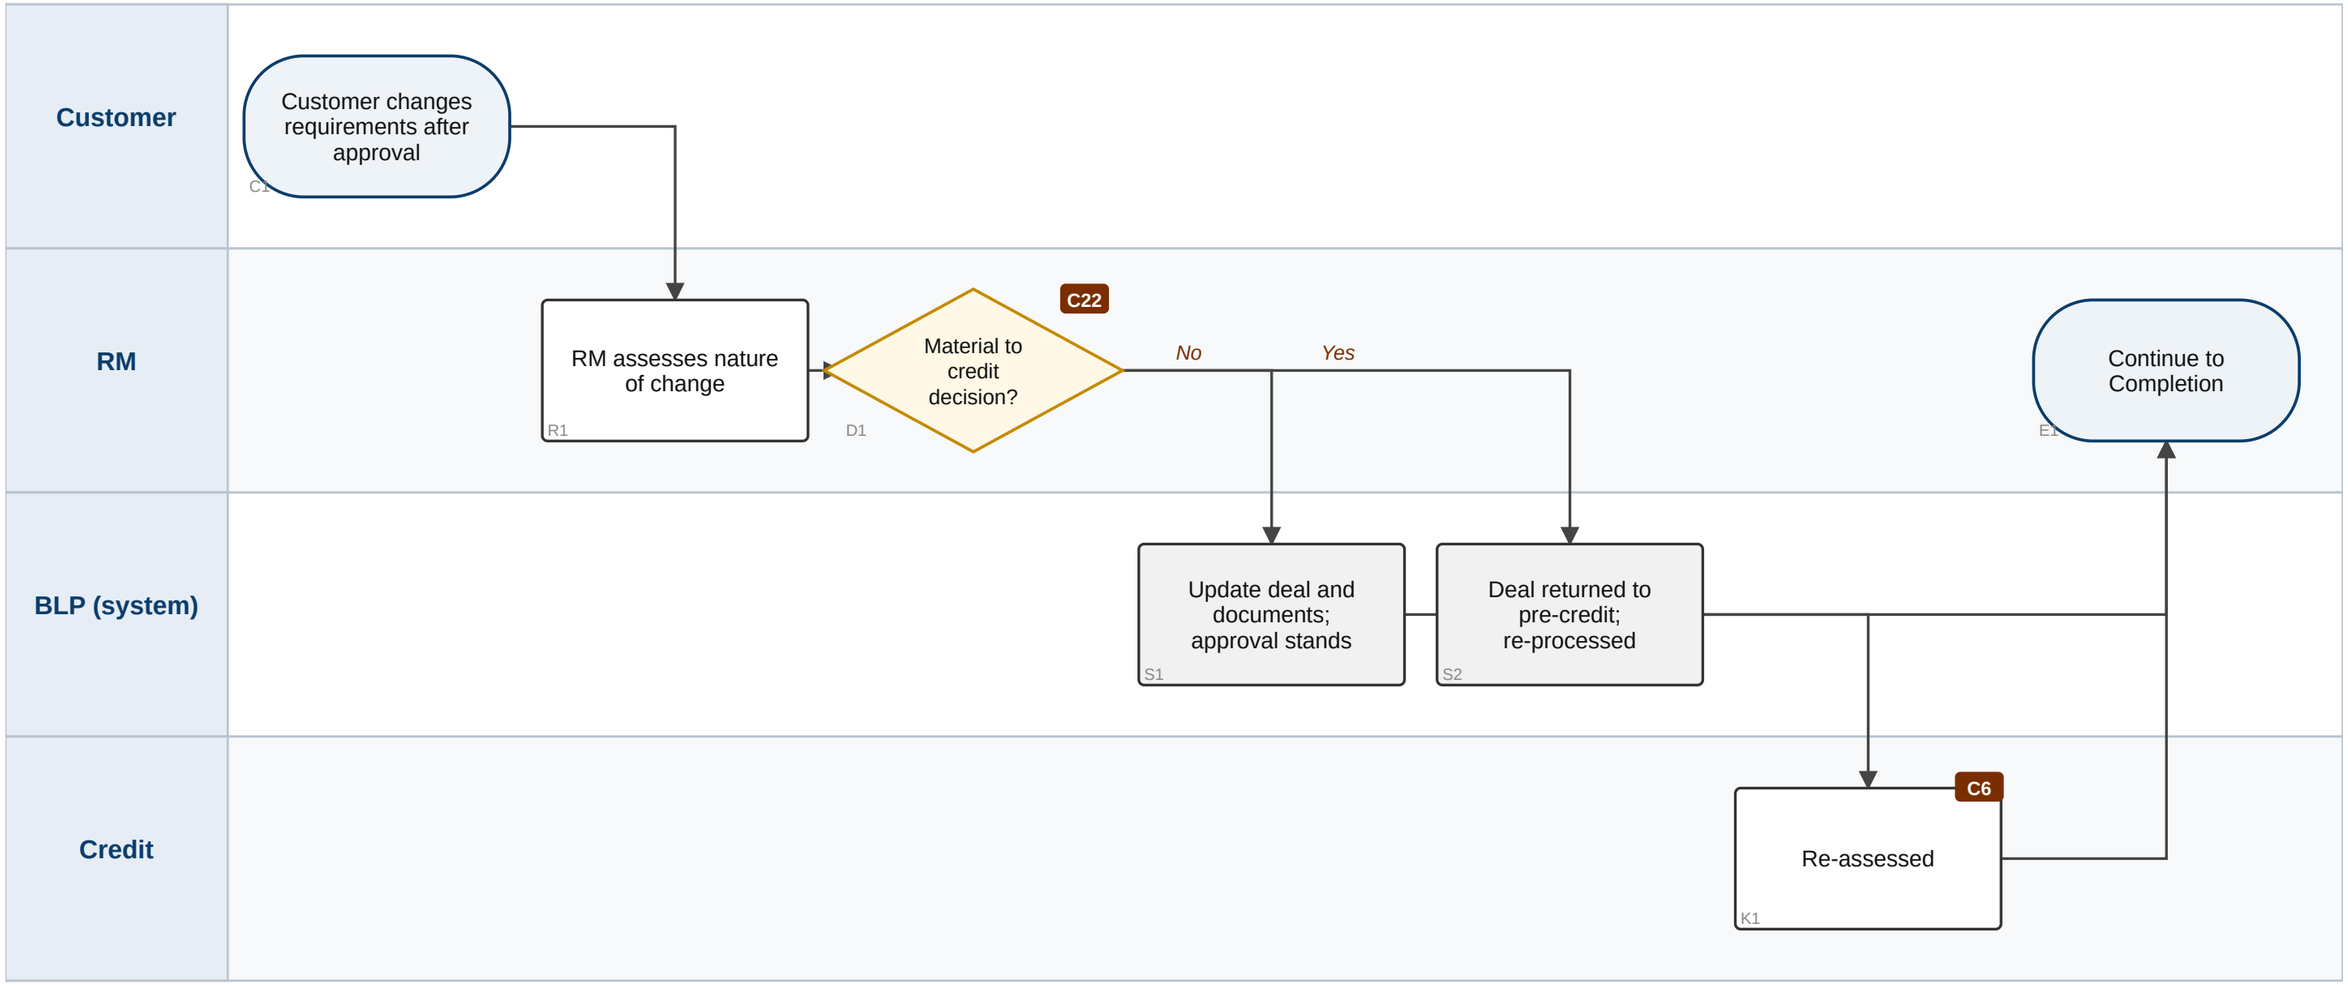

- How many deferral loops per deal on average and at the tail?
- Is the same Credit assessor allocated on re-submission?
- Is there a checklist of submission requirements that would prevent the first deferral?

L4 step table

ID	Lane	Step	Type	Control	Wait	Note / as-is detail
K1	Credit	Credit defers decision; information request raised	Start			
S1	BLP (system)	Deal status set to deferred; request text in comments	System			Request content likely free text; no structured checklist
R1	RM	RM reviews request; contacts customer	Manual		●	
C1	Customer	Customer provides information	Manual		●	
R2	RM	RM updates deal and credit memo	Manual			
S2	BLP (system)	Deal re-submitted to Credit	System		●	
K2	Credit	Re-assessed (same assessor?)	Manual	C6		
D1	Credit	Sufficient?	Decision			
E1	Credit	Decision made	End			

EX-03 · Exception path · Change in deal after credit approval

Source	Validation workshop	Status	Lanes
Not mapped in source (note: “deal to be re-processed”)	WS-11	**Straw-man – to be built in workshop**	Customer · RM · BLP (system) · Credit

Observations

- Straw-man. The source says only that the deal is “re-processed”. Whether a minor change (e.g. drawdown date) triggers a full re-approval determines the size of the C3 rework loop.

Open questions for WS-11

- Is there any materiality threshold, or does every post-approval change go back through Credit?
- How often does this occur on New Money and Increase deals?

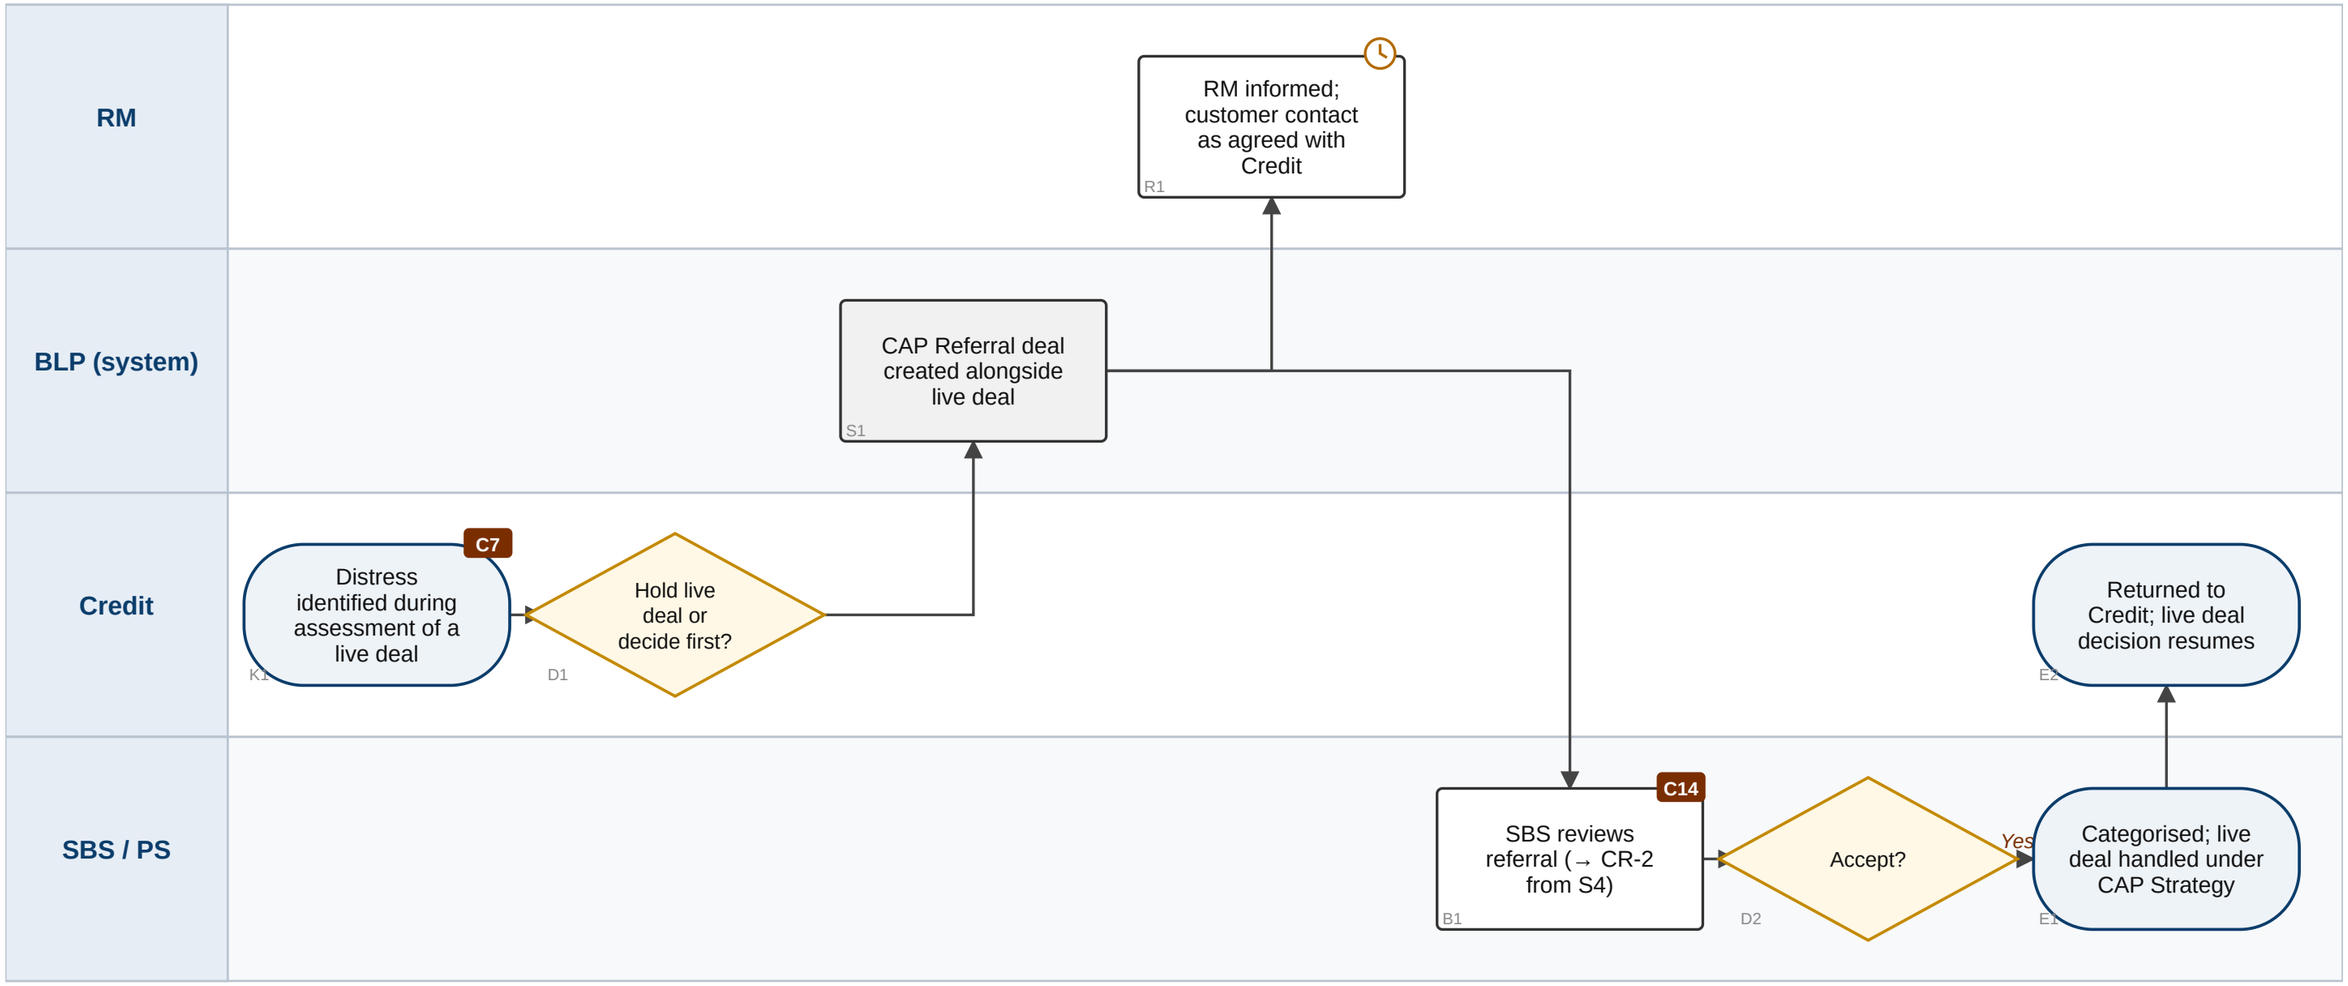

L4 step table

ID	Lane	Step	Type	Control	Wait	Note / as-is detail
C1	Customer	Customer changes requirements after approval	Start			
R1	RM	RM assesses nature of change	Manual			
D1	RM	Material to credit decision?	Decision	C22		C22: materiality criteria; not documented
S1	BLP (system)	Update deal and documents; approval stands	System			
S2	BLP (system)	Deal returned to pre-credit; re-processed	System			

K1	Credit	Re-assessed	Manual	C6		
E1	RM	Continue to Completion	End			

EX-04 · Exception path · In-flight CAP referral to SBS

Source	Validation workshop	Status	Lanes
Not mapped in source (blue sub-process box on Deal & Credit maps)	WS-07 / WS-11	**Straw-man – to be built in workshop**	RM · BLP (system) · Credit · SBS / PS

Observations

- Straw-man. The live deal's fate while the referral is reviewed (held, declined, or approved with conditions) is undefined in the source. Existing-customer deals only.

Open questions for WS-07 / WS-11

- What happens to the original deal while SBS reviews?
- Is the referral a separate deal record, or a status on the live deal?

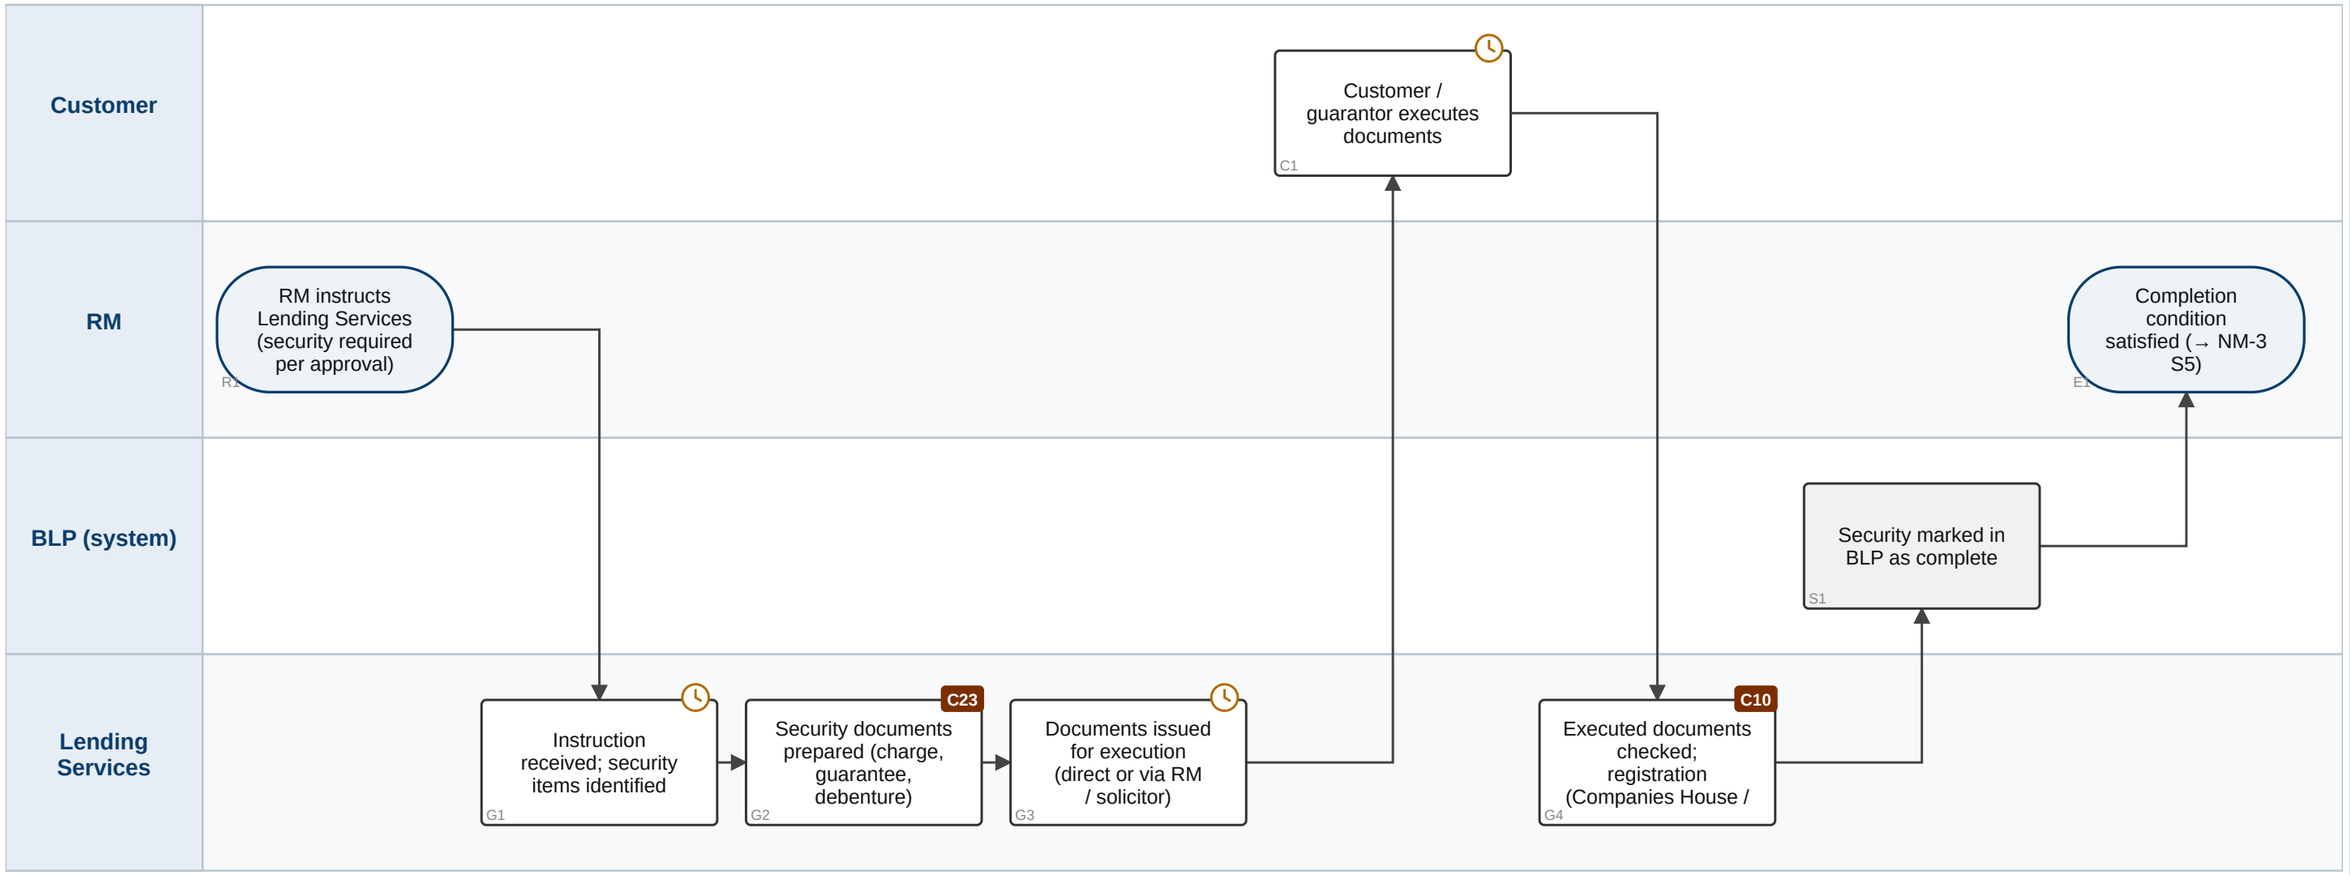

L4 step table

ID	Lane	Step	Type	Control	Wait	Note / as-is detail
K1	Credit	Distress identified during assessment of a live deal	Start	C7		
D1	Credit	Hold live deal or decide first?	Decision			
S1	BLP (system)	CAP Referral deal created alongside live deal	System			
R1	RM	RM informed; customer contact as agreed with Credit	Manual		●	

B1	SBS / PS	SBS reviews referral (→ CR-2 from S4)	Manual	C14		
D2	SBS / PS	Accept?	Decision			
E1	SBS / PS	Categorised; live deal handled under CAP Strategy	End			
E2	Credit	Returned to Credit; live deal decision resumes	End			

EX-05 · Exception path · Security preparation (Lending Services)

Source	Validation workshop	Status	Lanes
Not mapped in source (blue sub-process box on Completion maps)	WS-12	**Straw-man – to be built in workshop**	Customer · RM · BLP (system) · Lending Services

Observations

- Straw-man. Security preparation is likely the longest parallel path in completion and is invisible in the source maps except as a sub-process box. Hypothesis C4 depends on measuring it.

Open questions for WS-12

- How is the instruction passed to Lending Services, and is there a queue?
- What is the elapsed time from instruction to “security complete”, by security type?
- Is registration tracked in BLP or in a separate Lending Services system?

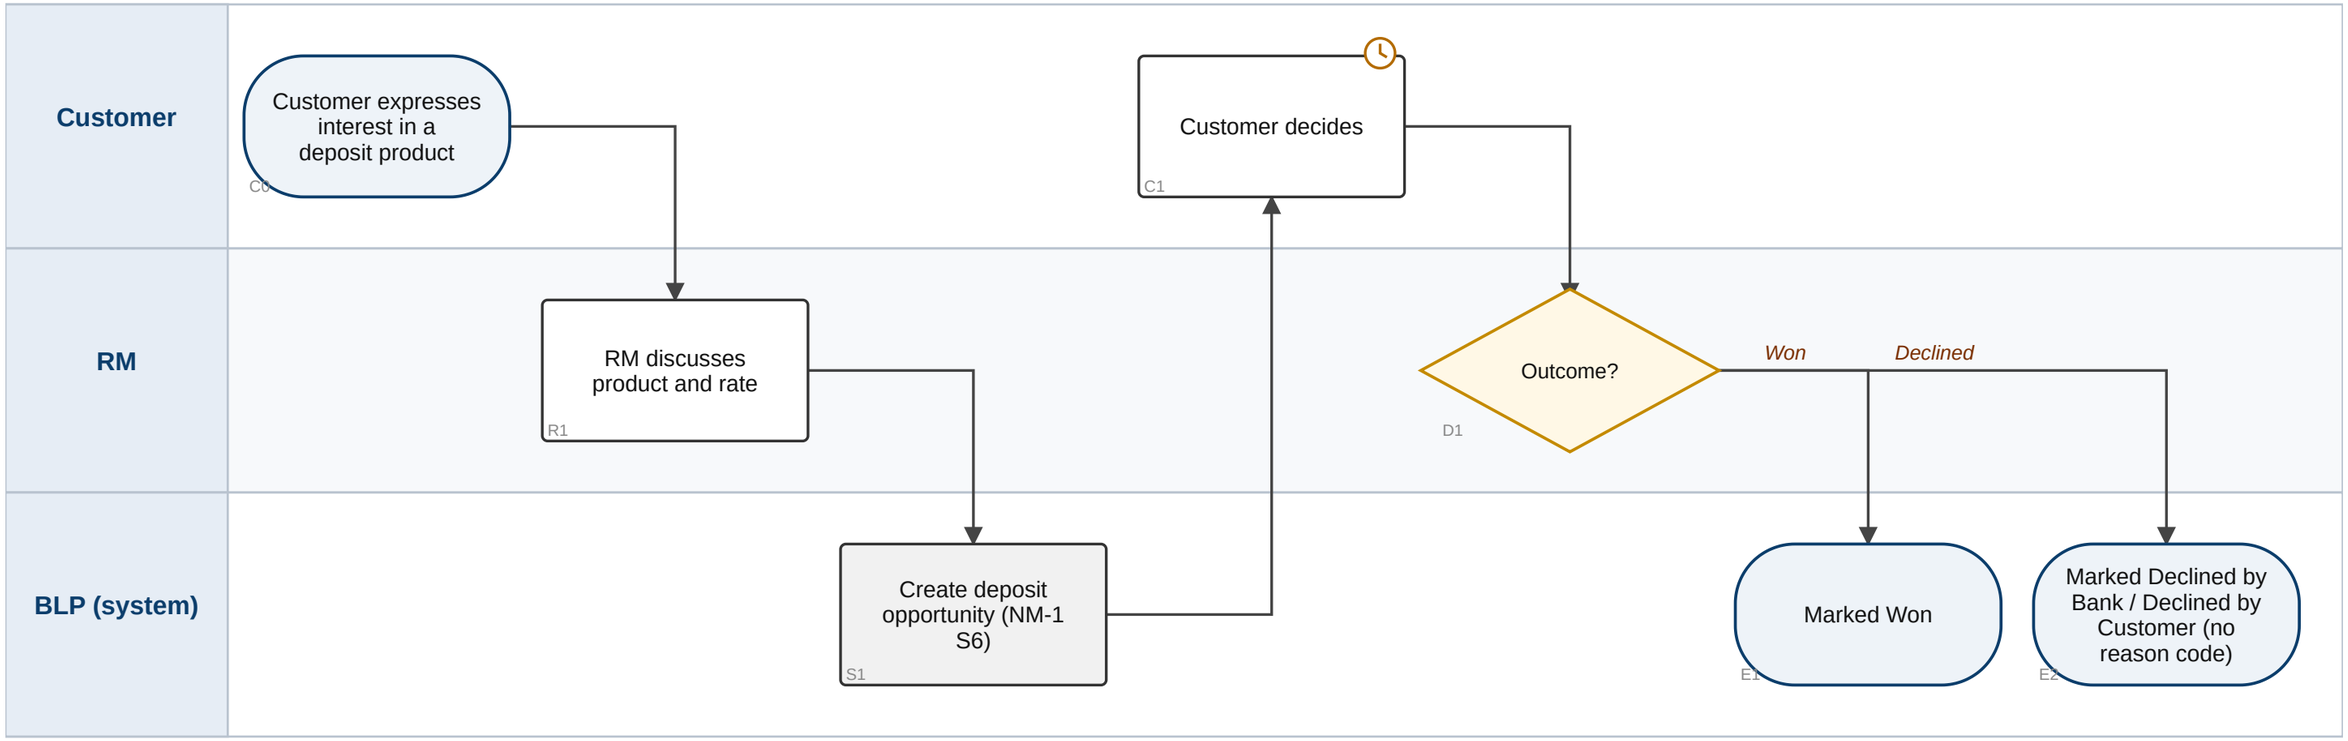

L4 step table

ID	Lane	Step	Type	Control	Wait	Note / as-is detail
R1	RM	RM instructs Lending Services (security required per approval)	Start			Instruction channel unknown: BLP task, email, or form
G1	Lending Services	Instruction received; security items identified	Manual		●	
G2	Lending Services	Security documents prepared (charge, guarantee, debenture)	Manual	C23		C23: security documentation per approved terms
G3	Lending Services	Documents issued for execution (direct or via RM / solicitor)	Manual		●	
C1	Customer	Customer / guarantor executes documents	Manual		●	
G4	Lending Services	Executed documents checked; registration (Companies House / Land Registry) where required	Manual	C10		
S1	BLP (system)	Security marked in BLP as complete	System			

E1	RM	Completion condition satisfied (→ NM-3 S5)	End			

DP-1 · Deposit opportunity · Record and close

Source	Validation workshop	Status	Lanes
Derived from RFP description and NM-1	WS-02	Draft for validation	Customer · RM · BLP (system)

Observations

- No workflow, no approval, no reason code. 98 in progress. Account opening itself happens outside BLP. Location decision SD-03 due by G1.

Open questions for WS-02

- Where is a deposit rate exception approved today?
- Does anyone use the deposit pipeline for MI?

L4 step table

ID	Lane	Step	Type	Control	Wait	Note / as-is detail
C0	Customer	Customer expresses interest in a deposit product	Start			
R1	RM	RM discusses product and rate	Manual			Rate exceptions: approval route outside BLP, if any
S1	BLP (system)	Create deposit opportunity (NM-1 S6)	System			
C1	Customer	Customer decides	Manual		●	
D1	RM	Outcome?	Decision			
E1	BLP (system)	Marked Won	End			
E2	BLP (system)	Marked Declined by Bank / Declined by Customer (no reason code)	End			

Validation plan (Weeks 3–6)

Workshop	Week	Maps validated	Attendees	Outputs
WS-02	3	NM-1, NM-2, DP-1	WG New/Increase: Senior RM, Credit Manager, Business Direct TL	Corrected maps; decline-reason capture confirmed; deposit path confirmed
WS-03	3	NM-3	WG New/Increase + Lending Services, Fulfilment	Letter issuance evidence; 3-month reset handling
WS-04	4	RN-1, RN-2, RN-3	WG Renewal & EPR	Renewal trigger; fast-track data availability (A2); EPR chain handling
WS-05	4	VA-1, VA-2, VA-3	WG Servicing	Variation reason taxonomy; which types reach Credit
WS-06	4	RF-1, RF-2	WG Servicing + Securities Team	Deal type used; associated-party handling; release sequence
WS-07	4	CR-1, CR-2, EX-04	WG Distressed: SBS, Credit, RM	Referral trigger; live-deal handling; elapsed time to categorisation
WS-08	5	CS-1, CS-2	WG Distressed	SBS authority; protected fields (ERV, provisions)
WS-09	5	SL-1, SL-2, SL-3	WG Pre-approved Drawdown	Off-platform letter confirmation; Staged Drawdown type retirement
WS-10	5	SR-1, SR-2, SD-1, SD-2	WG Pre-approved Drawdown	Material-change triggers; repayment schedule question; letter proportionality
WS-11	5	EX-01, EX-02, EX-03	All WG leads, Credit Manager	Exception paths built from straw-men; loop limits; appeal process
WS-12	6	EX-05; security steps on NM-3, VA-3, RF-2	Lending Services, Fulfilment, Securities	Security path elapsed time; instruction channel; registration tracking
WS-13	6	All control badges	WG Controls & Data: Credit Risk Policy, 2nd line	Control source classification → 1.6
WS-14	6	All maps, segment lens	Team leaders BD / SF; Corporate Associate	Segment variants marked on maps

Exit criteria for v1.0

- Every “Draft for validation” map signed off by its working-group lead (Bank) as a true record of current practice
- Every straw-man replaced by a validated map or formally recorded as “no defined process exists”
- Every open question answered or converted to a RAID item
- Every control badge classified in 1.6
- Segment variants marked where they exist; absence of variation confirmed where they do not
