BUSINESS BANK · BUSINESS BANKING TRANSFORMATION OFFICE · BB-BLP-BPR

1.8 Regulatory Reporting and MI Data Lineage

Which BLP data feeds which report, where it is captured in the process, and what the redesign must protect

Deliverable	1.8 Regulatory reporting and MI data lineage; protected-fields list
Version	0.4 – structure, data domain model, capture-point mapping and draft protected-fields list from 1.2 maps (Week 3). Report inventory and field-level lineage populated from DR-10 and MI interviews (Weeks 4–6) → v1.0
Source	RFP (BLP as key source for regulatory reporting and operational MI); 1.2 maps (capture points); 1.6 (REG-class controls); DR-10 lineage extract [pending W4]; DR-15 MI packs; MI Manager interview (H-F2)
Owner	WS3 Data & MI (Data/MI Analyst) with Bank BA
Accepted by	Head of MI & Regulatory Reporting; noted by second-line Risk
Tests	Hypotheses F1 (field-level lineage undocumented), F2 (manual MI adjustment because capture varies). Feeds dependency B-07 (protected fields to the Replacement Programme, W7) and design decision DD-09

What is and is not known. The RFP states that BLP is a key data source for regulatory reporting and operational MI. It does not say which returns. Section 3 lists the returns a UK business bank would *typically* source from a lending platform, as a candidate list for Regulatory Reporting to confirm or strike, not as a statement of what the Bank submits. Nothing in this document should be read as asserting the Bank's regulatory obligations.

1. Purpose and the rule this document enforces

Objective O6 and RFP constraint §7 say the same thing: no design may remove a reporting data point without MI / Regulatory Reporting sign-off. That rule cannot be applied unless someone knows which data points those are. Today, per hypothesis F1, that knowledge sits in extract scripts and in people's heads. This document makes it explicit in three layers:

Layer	Question answered	Source	Status at v0.4
A. Report inventory	Which regulatory returns and MI reports take data from BLP?	DR-10; Reg Reporting; MI Manager	Candidate list; to confirm
B. Field lineage	For each report, which BLP fields, through what transformation, with what manual adjustment?	DR-10 extract scripts; MI packs	Register template; populated W4–6
C. Capture-point mapping	At which process step, by whom, is each field created or changed?	1.2 maps; 1.6 controls	**Built** from the maps (section 5)

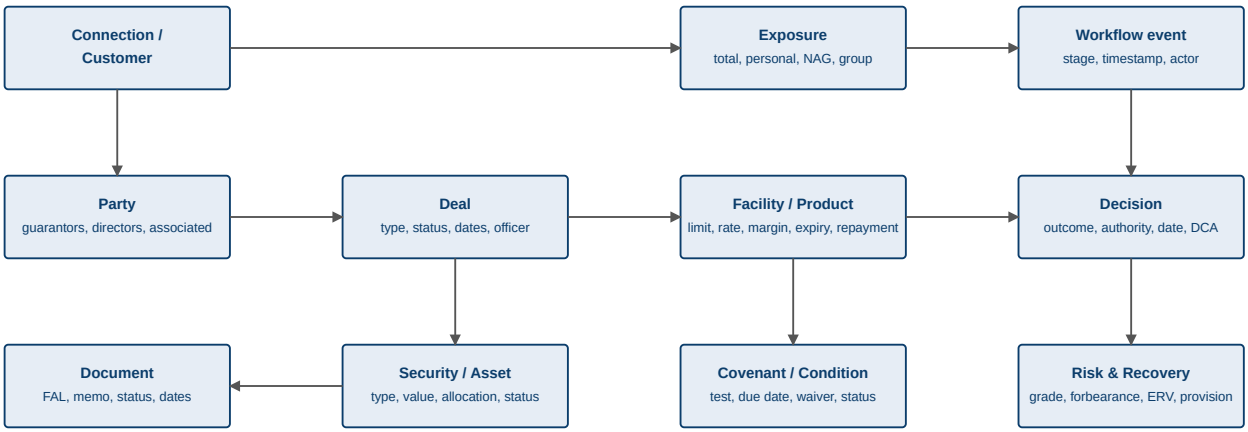

Layer C is the one the redesign actually needs: it tells the Phase 2 team that if a step is eliminated or automated, these fields must still be captured, by some step, to the same definition. The **protected-fields list** (section 6) is the intersection of layers B and C, and is dependency B-07 to the Replacement Programme.

Definitions

Term	Meaning here
Protected field	A BLP data element that feeds a regulatory return, a statutory or audited figure, or a SteerCo-level MI measure. Its definition, capture and timing may not change without the owner's sign-off
Capture point	The process step (map · step ID) at which a field is first populated or materially changed
Manual adjustment	Any step between BLP extract and reported figure performed outside a controlled, documented transformation (spreadsheet correction, re-classification, exclusion list)
Lineage	Source field → transformation → report line, with owner and frequency

2. Data domain model (from the maps)

The entities BLP holds, as implied by the 1.2 maps and the RFP description. This is a logical model for lineage purposes, not BLP's physical schema (which the Replacement Programme holds).

Arrows show the main containment / reference direction. Exposure is aggregated from facilities across the connection; workflow events attach to the deal.

Domains by reporting relevance (hypothesised; confirmed in layer B)

Domain	Likely regulatory relevance	Likely MI relevance	REG-class controls (1.6)
Risk & Recovery	High: forbearance, impairment inputs (ERV, provisions, write-offs), risk grade	High: watch-list, CAP MI	C15, C17
Facility / Product; Exposure	High: exposure, limits, product classification, maturity, interest rate	High: pipeline, book composition	C5 (authority), C27
Connection / Customer; Party	Medium: counterparty classification, SME status, sector, connected exposures	Medium	C1
Decision	Medium: decline data, authority evidence	High: approval rates, cycle time	C5, C6, C20
Security / Asset	Medium: collateral values for credit risk mitigation	Medium	C10
Covenant / Condition	Low: indirect (breach → forbearance)	Medium: monitoring	C9, C25
Document; Workflow event	Low	High: operational MI, SLAs	C8

3. Layer A — Report inventory (candidate list; confirm or strike with Regulatory Reporting, W4)

Returns a UK business bank commonly sources, in whole or part, from a business lending platform. Each row is confirmed, amended or struck by the Head of MI & Regulatory Reporting against DR-10. Rows that survive get a field-level lineage entry in section 4.

ID	Report (candidate)	Regulator / audience	Likely BLP contribution	Frequency	Owner	Status
RR-01	Credit risk capital returns (COREP credit risk templates)	PRA	Exposure, product class, counterparty type, collateral, risk grade	Quarterly	[DR-10]	Confirm
RR-02	Financial reporting / FINREP incl. forbearance and non-performing exposure templates	PRA	Forbearance status, NPE flags, impairment stage inputs	Quarterly	[DR-10]	Confirm
RR-03	IFRS 9 impairment (ECL) model inputs	Finance / auditors	Risk grade, grade migration, arrears, forbearance, ERV, provisions, write-offs	Monthly / quarterly	[DR-10]	Confirm
RR-04	Large exposures / connected counterparties	PRA	Connection, group and NAG exposure aggregation	Quarterly	[DR-10]	Confirm
RR-05	Bank of England lending statistics (business lending, SME lending by sector and size)	BoE	New lending, facilities, limits, sector, SME classification	Monthly / quarterly	[DR-10]	Confirm
RR-06	Scheme and guarantee reporting (any government-backed lending schemes in the book)	Scheme administrator	Facility, drawdown, status	Per scheme	[DR-10]	Confirm / strike
RR-07	Conduct and SME lending conduct data (declines, appeals, complaints linkage)	FCA / internal conduct	Decline reasons, appeal outcomes	Periodic	[DR-10]	Confirm
RR-08	Internal risk appetite and board risk reporting	Board / Risk Committee	Book composition, watch-list, CAP, concentrations	Monthly	[DR-10]	Confirm
RR-09	Audit and second-line control testing extracts (delegated authority, approvals)	Internal Audit / 2nd line	Decision, authority level, approver	Periodic	[request]	Confirm
Operational MI (from DR-15 packs)						
MI-01	Pipeline and deals-in-progress	Business Banking leadership	Deal, stage, officer, value	Weekly	MI	Confirm
MI-02	Renewals due / overdue (BDRM)	Segment heads, RMs	Facility review and maturity dates	Weekly	MI	Confirm; W-11
MI-03	Credit throughput and queue	Credit	Transfers, decisions, timing	Weekly	MI	Confirm
MI-04	CAP / SBS caseload	SBS	Referrals, categorisation, strategy	Monthly	MI	Confirm
MI-05	Covenant and waiver status	RMs, Credit	Covenant records; batch outputs	Monthly	MI	Confirm
MI-06	Deposit opportunity pipeline	Segment heads	Opportunities and status	Monthly	MI	Confirm; SD-03

4. Layer B — Field-level lineage register (template; populated from DR-10, W4–6)

One row per report × BLP field. The two example rows show the required level of detail; they are drawn from the maps and are themselves to be confirmed.

Report	Report line / template cell	BLP field (logical)	Domain	Capture point (map · step)	Captured by	Transformation	Manual adjustment (H-F2)	Frequency	Owner	Protected?	Notes
RR-02 (ex.)	Forborne exposures	Forbearance status; forbearance date; measure type	Risk & Recovery	CR-2 S7 (assessment); W-02 batch (status)	SBS; batch	Status → forborne flag; aggregation by facility	[DR-10: e.g. re-classification of statuses set by batch after cut-off]	Quarterly	[DR-10]	**Yes**	Control C15; batch W-02 sets status outside the workflow audit trail
RR-03 (ex.)	Expected recovery / provision inputs	ERV; provision; write-off amount; recovery team	Risk & Recovery	CS-2 S4 (recovery updates)	SBS	Direct feed to impairment model	[DR-10]	Monthly	[DR-10]	**Yes**	Control C17; memo content off-platform (W-09) so narrative not reportable
RR-xx											one row per report × field
MI-xx											

Manual adjustment log (H-F2) (populated from MI Manager interview and DR-15, W4)

ID	Report	Adjustment performed	Why (capture gap, timing, classification)	Where (spreadsheet / script)	Hours per cycle	Error exposure	Root cause in process	Closed by lever
MA-01	[DR-15]	e.g. re-classify deal types recorded as Variation that are removals	No removal type (W-17)				Deal-type model	L12
MA-02	[DR-15]	e.g. exclude ESR Cleanse from volume MI	Non-customer deals in deal table (W-18)				Deal-type model	L6
MA-03	[DR-15]	e.g. segment attribution from officer code after mass reassignment	W-04 batch without history				Ownership audit trail	L14
MA-xx								

The three example adjustments are hypotheses derived from the workaround inventory (1.7); they illustrate the kind of adjustment H-F2 predicts. The interview establishes which actually occur.

5. Layer C — Capture-point mapping (built from 1.2)

For each reporting-relevant field group, the process step that creates or changes it. This is the layer the redesign uses: any lever that eliminates, automates or moves one of these steps must show where the field is captured in the to-be. Confirmed against DR-10 in Week 4; field groups not in any report are dropped from the protected list but kept here for MI.

#	Field group	Domain	Capture point(s) — map · step	Captured by	Mode	Control	Likely reports	Levers that touch the step	Redesign risk and mitigation
F01	Customer identity; counterparty type; sector; SME classification	Customer	NM-1 S3–S5; SL-1 S5 (new); CIF for existing	RM	Manual / CIF	C1	RR-01, RR-04, RR-05	L2 (deal start)	Low: deal-start component retains capture; pull from CIF improves quality
F02	Parties, guarantors, associated persons; connection membership	Party	NM-1 D1/S3 loop; VA-1 S5; CS-2 (deal members)	RM; SBS	Manual	C1	RR-04 (connected exposure)	L2	Medium: party-completeness rule must be in the to-be; removal journeys must update associated parties (RF-2 TBC)
F03	Deal type; facility request type; restructure flag; dates (created, review, maturity)	Deal	NM-1 S7; RN-1 S5; SR-1 S6; SD-1 S6	RM	Manual	—	MI-01, MI-02; RR-05 (new lending)	L12 (deal-type model)	High: deal types change to patterns; every report keyed on deal type needs a mapping table from old types to new; retired types (ESR Cleanse) must be excluded consistently from history
F04	Product; limit; interest rate (reference + margin); fees; repayment schedule; expiry	Facility	NM-1 S8; SL-1 S8–S9; SR-1 S7–S8; SD-1 S7–S8; CS-2 S1 (limits reduced)	RM; SBS	Manual	C19	RR-01, RR-03, RR-05, RR-06	L1, L5, L12	Medium: fast-track renewal (L1) must still re-confirm limit and dates; automated limit arithmetic (C19) strengthens

F05	Exposure: total, personal, NAG, group	Exposure	Derived; updated by ESR Cleanse (E2.5) for personal and NAG exposure	System; RM (ESR)	Derived / manual	—	RR-01, RR-04	L6 (retire ESR Cleanse as deal)	High: SD-01 option (c) exists precisely because these updates must survive; migration spec must carry them
F06	Risk grade; ECRS classification; lending category; debt-servicing result	Risk	*-2 R3 (credit analytics); CR-2 R3	RM	Manual (some off-platform, W-10)	C2	RR-01, RR-03, RR-08	L1, L11, L14	High: fast-track renewals skip full analytics; grade must still be refreshed at renewal (policy question for WS-13); capture-once design must not drop classification fields
F07	Decision; authority level; approver; DCA; decline reason	Decision	*-2 D2, R6, D4, S5; EX-01 S1	RM; Credit	Manual	C5, C6, C20	RR-07, RR-09, MI-03	L1, L3	Medium: automated DA determination (L3) must record authority level as evidence, not just route; decline reason code is new capture (improves RR-07)
F08	Security: type, value, allocation, perfection status, release	Security	EX-05 G2–S1; RF-2 S2–S3; NM-3 S5	Lending Services; Securities	Manual	C10, C23	RR-01 (CRM)	L8, L15	Medium: on-platform instruction (L8) must keep value and allocation fields; release sequence correction changes timing of status
F09	Covenants; tracking items; waivers and expiry	Covenant	VA-3 S4; RF-2 S4; W-03 batch	RM; batch	Manual / batch	C9, C25	MI-05	L7 (retire batch)	Low: native lifecycle replaces batch; status definitions must match

F10	Forbearance status, date, measure	Risk & Recovery	CR-2 S7; W-02 batch	SBS; batch	Manual / batch	C15 (REG)	RR-02, RR-03	L7, L10	High: regulatory. Native status logic must reproduce batch rules exactly; cut-over reconciliation required
F11	ERV; provisions; write-offs; recovery team; categorisation cause	Risk & Recovery	CS-2 S4; CR-2 S5–S6	SBS	Manual	C17 (REG), C14	RR-02, RR-03, RR-08	L14, L15 (memo on-platform)	High: regulatory. Structured memo (W-09) adds fields; existing fields unchanged; validation rules on entry
F12	Officer code; segment; team	Deal	Deal creation; CR-2 S8; W-04 batch	RM; SBS; batch	Manual / batch	C26, C27	All MI segment cuts; RR-08	L7, L14	Medium: ownership transfer with history enables correct segment attribution over time (MA-03)
F13	Facility letter status and dates; document references	Document	*-3 S1–S3; DR-08 coverage TBC	RM; system	Manual	C8	MI (SLA); RR-07 (evidence)	L4	Low: automation creates these fields properly for the first time
F14	Workflow stage, timestamps, actor	Workflow event	Every transition	System	Auto	—	MI-01, MI-03; 1.4 baseline	All	Medium: stage model changes with patterns; 1.4 Appendix A mapping must be re-issued for the to-be so baselines remain comparable
F15	Deposit opportunity status and value	Deal	NM-1 S6; DP-1	RM	Manual	—	MI-06	SD-03	Low: if deposits move to CRM, MI-06 moves with them

6. Draft protected-fields list (dependency B-07; design decision DD-09)

Fields proposed as protected pending confirmation of the report inventory. The list goes to the Replacement Programme at Week 7 so the data model is designed around them.

Field group	Protection level (H)	Rule for Phase 2 design	Confirm with
F10 Forbearance; F11 ERV, provisions, write-offs, categorisation	**P1 Regulatory**	Definition, capture and timing unchanged. Any change in capture mechanism requires parallel-run reconciliation at cut-over. Second line informed	Reg Reporting; Finance; 2nd line
F04 Limits, rates, expiry; F05 Exposure; F06 Risk grade and classifications; F08 Security values	**P1 Regulatory**	As above; fast-track and capture-once levers must demonstrate the field is still populated at the same or earlier point	Reg Reporting; Credit Risk
F01 Customer classification; F02 Parties and connection	**P2 Regulatory-derived**	Definition unchanged; capture may move to CIF pull-through if equivalence shown	Reg Reporting; Compliance
F07 Decision, authority, decline reason; F12 Officer, segment	**P2 Audit and MI**	Authority evidence must be captured by the automated determination; history of ownership retained	2nd line; Audit; MI
F03 Deal type and dates; F14 Workflow events	**P3 MI continuity**	Old-to-new mapping table maintained for 24 months; stage mapping re-issued for the to-be	MI
F09 Covenants; F13 Documents; F15 Deposits	**P4 Operational**	May change with MI owner agreement	MI; Lending Ops

6.1 Lever impact summary

Lever	Field groups touched	Highest protection touched	Design obligation
L1 Fast-track renewals	F04, F06, F07	P1	Define which risk fields are refreshed on fast-track and by what mechanism; grade staleness rule
L2 Shared deal start	F01, F02	P2	Party-completeness rule; CIF pull-through equivalence
L3 Automated DA	F07	P2	Record authority level and rule version as evidence
L6 Retire ESR Cleanse	F05	P1	Migration spec for personal and NAG exposure updates (SD-01 c)
L7 Retire batch jobs	F09, F10, F12	P1	Native rules reproduce batch logic; cut-over reconciliation for forbearance
L12 Deal-type model	F03	P3	Mapping table; restated history
L14 / L15 Capture once; on-platform documents	F06, F11	P1	No field dropped; structured memo adds, never replaces

7. Plan to v1.0 and WS-13 / MI agenda

Week	Activity	Output	Owner
3	MI Manager interview: report list, extract scripts, known adjustments (H-F2)	§3 confirmed or struck; §4 adjustment log seeded	Data/MI Analyst
4	DR-10 received: field-level lineage per surviving report; DR-15 MI packs reviewed	§4 register populated	Data/MI Analyst; Bank BA
5	Cross-check §5 capture points against DR-10 fields; identify fields captured off-platform (W-10) or by batch	§5 confirmed; gaps listed	Data/MI Analyst
6	WS-13 (joint with 1.6): protection levels agreed; second line informed	§6 agreed	Controls Specialist; Head of MI
7	Protected-fields list issued to Replacement Programme (B-07; DD-09)	v1.0	Platform Analyst

Hypothesis read-out criteria

Hyp.	Confirmed if
F1	Fewer than half of surviving reports have documented field-level lineage before this exercise (evidence: DR-10 contents vs. §4 requirement)
F2	At least three recurring manual adjustments identified, each traceable to a capture or classification gap in the process

Exit criteria for v1.0

- Every surviving report in §3 has at least one row in §4 per BLP field it uses
- Every field in §4 has a capture point in §5
- Protection level agreed for every field group in §6, with named confirmer
- Manual adjustment log complete, each with root cause and lever
- B-07 list acknowledged by the Replacement Programme Data Lead
